

Subject card

Subject name and code	Electrical Measurements of Non-Electrical Values, PG_00038472						
Field of study	Electrical Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Metrology and Information Systems -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marek Wołoszyk				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		10.0		20.0	75
Subject objectives	Acquiring knowledge on the theory of aquisition and processing measurement signals as well as methods and measuring instruments used for nonelectrical measurements.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K03] can interact and work in a group assuming various roles and identify priorities for the achievement of a specific task		Student is able to work individually and in a group, knows how to estimate the time needed to carry out the task, and is able to implement the work schedule.		[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills		
	[K7_U05] is able to select equipment and carry out electrical measurements, design measuring systems for the determination of nonelectrical quantities, and analyse the results obtained		Student matches appropriate tools for specific measurement tasks. Student designs measurement systems for determining non-electrical quantities. Student analyzes the received measurement results		[SU1] Assessment of task fulfilment		
	[K7_W02] has an in-depth and structured knowledge of electrical measurements electrical measurements, the methods and equipment used for electrical measurements of non-electrical quantities, he/she knows the principles of testing operation tests of electrical equipment, has a structured knowledge of electricity quality issues		Student recognizes methods and equipment used in measurement of non-electrical quantities. Student matches appropriate tools for specific measurement tasks. Student applies the rules to eliminate the impact of external factors on the measurement accuracy. Student calibrates sensors and measurement circuits. Student analyzes the received measurement results.		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>LECTURE Classification of sensors and converters used in non-electrical quantities measurement. Static and dynamic properties of measurement sensors and converters. Sensors out-signal standards and rules of matching the signals with measurement systems. Elimination of external noises that disturb work of measurement sensors. Electrical measurement of temperature. Geometrical quantities measurement (dimension, displacement, level...). Movement parameters measurement (linear and rotational speed,...). Electrical measurement of forces and stresses. Measurement of pressure, flow and volume. Electrical measurement of environmental and physycal parameters.</p> <p>PROJECT During the project the student should develop a fragment of a measurement system for some industrial installation containing the measurement of at least four non-electrical quantities. The project should include a detailed selection of sensors including the development of ways of communicating these sensors with primary system and should contain an overall concept of a measurement system.</p> <p>LABORATORY Principles of development and documentation of measurement results. Elimination of the influence of external factors on the sensor - auto-calibration and linearization of characteristics. Water level measurements. Displacement measurements. Inclino-metric measurements. Pressure measurements. Temperature measurements.</p>		
Prerequisites and co-requisites	Basic metrology knowledge.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	60.0%	40.0%
	Laboratory exercises	60.0%	30.0%
	Written test	60.0%	30.0%
