

Subject card

Subject name and code	Electromechanical Systems, PG_00038474						
Field of study	Electrical Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Andrzej Wilk				
	Teachers		dr inż. Filip Kutt				
			dr hab. inż. Michał Michna				
			dr hab. inż. Andrzej Wilk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		30.0	100
Subject objectives	The main objective of the subject is to develop mathematical models of electromechanical systems. Partial objectives include developing metamatic models of such transducers as: induction machine, synchronous machine, direct current machine, synchronous machine excited by permanent magnets.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W07] has an in-depth, theoretically grounded knowledge of electromechanical systems and their electromechanical systems and their design, electrotraction systems power supply and electrical energy storage devices		Designs electromechanical systems using electric machines		[SW3] Assessment of knowledge contained in written work and projects		
	[K7_U06] is able to analyse, model, simulate and design electrical systems		Models and analyzes electromechanical transducers		[SU1] Assessment of task fulfilment		
Subject contents	Lecture: MMF of winding. Equivalent diagrams of windings of electromechanical converters. Equations of electromagnetic circuit: induced voltage of transformation, induced voltage of rotation, voltage drops on resistances. Electromagnetic torque and mechanical equation. Clarke and Park transformation. Model of induction machine in natural axes, alpha-beta and d-q. Model of synchronous machine in natural axes, alpha-beta and d-q. Model of PMSM machine in natural axes, alpha-beta and d-q. Model of DC machine.Lab: Study of steady and transient states of electric machines.Project: Simulation of steady and transient states of electric machines						
Prerequisites and co-requisites	General knowledge of the subjects of Electrical circuits, Electrodynamics and Electrical machines, ability to analyse electrical and magnetic circuits in steady and dynamic states, ability to analyse electrical machines in steady states.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Practical exercise		60.0%		40.0%		
	Written exam		60.0%		60.0%
