

Subject card

Subject name and code	CHEMISTRY OF SYNTHETIC DRUGS, PG_00038903						
Field of study	Chemistry						
Date of commencement of studies	February 2025	Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies	Subject group			Optional subject group		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Organic Chemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Krystyna Dzierzbicka					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	10.0		80.0		150
Subject objectives	Overview of synthesis of selected drugs from different pharmacological groups. Implementation of selected pharmaceutical preparations in accordance with <i>List of Preparations</i> containing a synthesis of single-stage, two-stage and multi-stage covering a variety of chemical processes for example: alkylation, acylation, nitration, sulfonation, esterification, oxidation, reduction.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_K01	The student has broadened knowledge in the field of drug chemistry, organic chemistry and synthesis of multi-stage organic compounds.			[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice		
	K7_U04	Student planning stages of several organic synthesis drugs.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	K7_W02	Student draws a correct structural formulas of drugs. Student identifies separate class of drugs. Student classifies organic reaction mechanisms in the synthesis of drugs.			[SW1] Assessment of factual knowledge		
	K7_U01	The student can use the appropriate literature sources on the synthesis of drugs.			[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		

Subject contents	<p>1. Acetylsalicylic acid and sulfonamides - historical, synthesis and application</p> <p>2. History of talidomide.</p> <p>3. Discussion syntheses of selected drugs the following pharmacological groups:</p> <p>3.1. analgesics and antipyretics drugs</p> <p>3.2. antiviral drugs</p> <p>3.3. anticancer drugs</p> <p>3.4. cardiac drugs</p> <p>3.5. antidiabetic drugs</p> <p>3.6. hypertension drugs</p> <p>3.7. hypnotics and sedatives drugs</p> <p>3.8. psychotropic drugs</p> <p>3.9. immunosuppressive drugs</p>											
Prerequisites and co-requisites	Student should possess background of organic chemistry and basic English to read reviews and original articles.											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="453 1106 799 1137">Subject passing criteria</th> <th data-bbox="804 1106 1142 1137">Passing threshold</th> <th data-bbox="1147 1106 1482 1137">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 1137 799 1218">Implementation of the planned syntheses of drugs according to the list.</td> <td data-bbox="804 1137 1142 1218">100.0%</td> <td data-bbox="1147 1137 1482 1218">50.0%</td> </tr> <tr> <td data-bbox="453 1218 799 1272">The meeting of 60% of points with three the lecture-colloquias.</td> <td data-bbox="804 1218 1142 1272">100.0%</td> <td data-bbox="1147 1218 1482 1272">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Implementation of the planned syntheses of drugs according to the list.	100.0%	50.0%	The meeting of 60% of points with three the lecture-colloquias.	100.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Implementation of the planned syntheses of drugs according to the list.	100.0%	50.0%										
The meeting of 60% of points with three the lecture-colloquias.	100.0%	50.0%

	eResources addresses	Adresy na platformie eNauczanie:

Example issues/ example questions/ tasks being completed	Student performs the synthesis of drugs, e.g. aspirin, paracetamol, salol, benzocaine, propranolol, phenytoin, lidocaine, cholamide. Present the mechanism of the various stages of acetylsalicylic acid synthesis. Give an example of asymmetric (<i>R</i>)-thalidomide synthesis. Starting from benzene, introduce the next steps for obtaining sulfanilamide. Give the structural formulas of three antihypertensive drugs that are angiotensin receptor antagonists.
Work placement	Not applicable
