

Subject card

Subject name and code	Methods of Structural Studies, PG_00048870									
Field of study	Engineering and Technologies of Energy Carriers									
Date of commencement of studies	February 2025	Academic year of realisation of subject		2025/2026						
Education level	second-cycle studies	Subject group		Obligatory subject group in the field of study						
Mode of study	Full-time studies	Mode of delivery		at the university						
Year of study	1	Language of instruction		Polish						
Semester of study	2	ECTS credits		3.0						
Learning profile	practical profile	Assessment form		assessment						
Conducting unit	Department of Organic Chemistry -> Faculty of Chemistry									
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Sławomir Makowiec							
	Teachers									
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM			
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45			
E-learning hours included: 0.0										
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM			
	Number of study hours	45	5.0		25.0	75				
Subject objectives	A main goal is to teach students basic spectroscopic methods including: NMR, IR, UV, and MS, and their application in the analysis of the structure of organic compounds									
Learning outcomes	Course outcome		Subject outcome			Method of verification				
	K7_W03		Student know how devices for aquistion of spectra works. Student has knowledge of the physical basis of spectroscopic techniques such as ^1H , ^{13}C NMR, IR and MS.			[SW1] Assessment of factual knowledge				
	K7_U01		Student recognizes functional groups occurring in compounds based on IR spectra. Student can interprets ^1H , ^{13}C , IR and MS NMR spectra. Student is able to describe the NMR ^1H ^{13}C MS and IR spectra. Student can identify organic compounds based on ^1H NMR, ^{13}C MS and IR spectra.			[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information				
Subject contents	I. Basics of spectroscopy: electromagnetic radiation, energy levels in molecules, radiation absorption, line shape, selection rules, application of Fourier transform in spectroscopy. II. NMR spectra, magnetic properties of atomic nuclei, physical basis of the NMR method, chemical shift, spin-spin coupling, magnetic anisotropy of groups, interpretation of ^1H NMR spectra, spin systems, elements of ^{19}F and ^{13}C NMR spectroscopy. III. Infrared spectroscopy (IR), harmonic and anharmonic oscillators, oscillations of polyatomic molecules, normal vibrations, transition probability, group frequencies, aquistion of IR spectra, interpretation of spectra, hydrogen bonds in IR. IV. Mass spectrometry (MS): physical basis of MS spectrum measurement, sample ionization methods, types of ions in MS, determination of molecular weight and molecular formula, fragmentation processes.									

Prerequisites and co-requisites	1. Knowledge of theoretical basis of spectroscopy 2. Knowledge of structures of organic compounds 3. Knowledge of nomenclature of organic compounds				
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	Four tests during semester	60.0%	100.0%
