| Field of study | Materials Engineering | | | | | | |
| Date of commencement of studies | October 2024 | Academic year of realisation of subject | | | 2024/2025 | | |
| Education level | second-cycle studies | Subject group | | | Specialty subject group Subject group related to scientific research in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 1 | Language of instruction | | | Polish | | |
| Semester of study | 2 | ECTS credits | | | 4.0 | | |
| Learning profile | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr inż. Mateusz Cieślak | | | | | |
| | Teachers | dr inż. Mateusz Cieślak | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 0.0 | 0.0 | 12.0 | 30.0 | 3.0 | 45 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | | SUM |
| | Number of study hours | 45 | 5.0 | | 50.0 | | 100 |
| Subject objectives | The aim of the course is to familiarize students with additive technologies, particularly 3D printing technologies, designing and manufacturing objects, and to introduce the principles of reverse engineering. The practical aspect of the course is based on applying the acquired knowledge in projects. During the completion of tasks, students will obtain prints with specific functional properties. | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | Method of verification | | |
| | [K7_W06] Knows the theoretical basics the functioning of scientific equipment in the fields of science and scientific disciplines relevant to materials engineering. | | The student is able to develop and carry out activities related to the application of selected additive technologies, using basic knowledge of these technologies. They are also able to prepare a substantive report. | | [SW1] Assessment of factual knowledge | | |
| | [K7_U06] Can evaluate usefulness and feasibility of using new achievements (techniques and technologies) within the scope of materials science. | | The student is able to face problems both independently and as part of a team and take responsibility for their decisions and their consequences. | | [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject | | |
| | [K7_W03] Has extended and enhanced knowledge of mathematics, physics, chemistry and other fields, useful when formulating and solving problems within the scope of materials science. | | The student has basic knowledge of the structure, production and properties of materials, especially those used in additive technologies. Knows the principles of conducting selected material tests and interpreting the results as well as creating technical documentation. | | [SW1] Assessment of factual knowledge | | |

| Subject contents | <p>Laboratory 1: Introduction to 3D Printing and Additive Technologies Introduction to the basics of additive technologies, principles of 3D printer operation, workplace safety, and preparation of 3D models.</p> <p>Laboratory 2: FDM Technology Designing and Printing Models Understanding the details of FDM technology, preparing models for printing, and calibrating the 3D printer.</p> <p>Laboratory 3: SLA Technology Printing with Photopolymer Resin Learning the principles of SLA printers, preparing models, and post-processing prints.</p> <p>Laboratory 4: SLS Technology Printing with Polyamide Powders Discussion of the principles of SLS technology, model preparation, and analysis of the advantages/limitations of this method.</p> <p>Project:</p> <p>Project 1: Students' Own Project (Any Technology: FDM, SLA, SLS, 3D Scanner) Students create their own project from concept to realization, using a selected 3D printing technology or 3D scanning. The project allows for the practical application of acquired knowledge, development of creativity, and teamwork skills.</p> <p>Project 2: Personalized Ergonomic Handle (FDM) Designing and printing an ergonomic handle that can be customized to individual user needs.</p> <p>Project 3: Prototyping Electrolyzer Components Using FDM 3D Printing and Conductive Materials Objective: Development of a prototype for water electrolyzer components using 3D printing technologies (FDM and SLA), with consideration of conductive filament materials. The project aims to demonstrate the potential of 3D printing in the design and production of devices related to hydrogen technologies and to introduce students to the practical aspects of additive manufacturing.</p> <p>Seminar: Student presentations showcasing and discussing the progress and outcomes of their research projects.</p> | | | | | | | | | | | | | | |

| Example issues/ example questions/ tasks being completed | <ol style="list-style-type: none"> 1. Describe the difference between the FDM method and the SLA method in 3D printing. What are their advantages and disadvantages? Compare both methods in the context of prototype production. 2. Explain what G-code is and how it is used in 3D printing. Describe what the basic G-code commands are and how they affect the printing process. 3. Discuss the different types of materials used in 3D printing. Compare thermoplastics and thermosets in terms of their applications and properties. Provide examples of products that can be printed with these materials. | | | | | | | | | | | | | | |
