

## Subject card

Subject name and code	Life Cycle Analysis of Building Materials , PG_00048496						
Field of study	Chemistry in Construction Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Energy Conversion and Storage -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Anna Kuczyńska-Łażewska				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		43.0	75
Subject objectives	The aim of the course is to learn the theory related to life cycle assessment (LCA) and the principles of life cycle assessment implementation and pro-ecological design of products and technological processes, using specialized software. Familiarize students with the use of LCA software and provide practical skills related to the creation of reports and presentation of results for various recipients.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U04		The student has detailed knowledge and is able to make a critical analysis in the field of technology for the production of materials and products as well as their modification and recycling.		[SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task		
	K6_W10		The student has knowledge to conducting a life cycle analysis of construction products, taking into account the principles of sustainable development and legal conditions. Is able to identify aspects in which improvement can be made taking into account the above assumptions.		[SW1] Assessment of factual knowledge		
	K6_K04		The student is able to participate in the preparation of team projects, taking into account economical, ecological and legal aspects.		[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills		
	K6_U06		The student is able to use specialized software to solve engineering tasks.		[SU4] Assessment of ability to use methods and tools		

Subject contents	LECTURE		
	1. Definition, principles, procedure and application of life cycle assessment (LCA) in determining the environmental impact of technological processes and products.		
	2. Goal and scope of the ecological life cycle assessment.		
	3. Analysis of the set of inputs and outputs.		
	4. Determining data quality and sources.		
	5. Life cycle impact assessment.		
	6. Programs and methods.		
	7. Interpretation of results and examination of completeness.		
	8. Product Environmental Declaration (EPD) - work on examples.		
	9. Uncertainty analysis. Monte Carlo method and others.		
	10. Life cycle cost analysis (LCC).		
	11. Practical examples of LCA application in industry.		
	LABORATORY EXERCISES		
	1. Become familiar with creating inventory tables and collecting data from primary and secondary sources.		
	2. Working with specialized software (SimaPro) and free software (OpenLCA).		
	3. Self-conducted analysis for a selected case.		
	4. Presentation of the results and proposals for solving environmental problems.		
	5. Preparation of a sample EPD		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	60.0%	50.0%
	Exam	60.0%	50.0%
