

Subject card

Subject name and code	, PG_00060098						
Field of study	Civil Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group					
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Structural Mechanics -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Andrzej Ambroziak					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	10.0	10.0	0.0	0.0	20
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	20	0.0		0.0	20	
Subject objectives	The aim of the course is to discuss the basic numerical methods in structural mechanics (approximation, interpolation, numerical integration) and to acquire skills in programming in the MATLAB language in the field of the discussed numerical methods.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W04] Knows the rules of descriptive geometry and technical drawing for preparing and reading architectural, construction and geodetic drawings; also with the use of CAD	The student knows the terminology in the field of computer science basics in the field of programming in the MATLAB language.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_W05] Demonstrate knowledge and understanding of research methods (obtaining information, simulations, experimental methods) in the field of civil engineering.	The student is able to use numerical and research methods in the field of information acquisition, simulation and use in experimental research.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.	The student is able to use numerical methods in the context of the basics of computer science. He is also able to analyze the methods themselves and assess their cognitive and practical value. Can choose the right IT tools and use them fluently.			[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools		
	[K6_U04] Reads and prepares construction documentation (including drawings, graphic documentation in the CAD environment), efficiently uses maps as well as architectural, construction and geodetic drawings.	The student knows and understands basic numerical methods (approximation, interpolation and numerical integration).			[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		

Subject contents	Discussion of selected numerical methods: approximation, interpolation, numerical integration. Basics of programming in the MATLAB program.		
Prerequisites and co-requisites	mathematics structural mechanics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final projects	60.0%	50.0%
	Final test	60.0%	50.0%
