

## Subject card

Subject name and code	, PG_00065912						
Field of study	Civil Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group					
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department Of Engineering Structures -> Faculty Of Civil And Environmental Engineering -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Tomasz Heizig					
	Teachers	dr inż. Dariusz Kowalski dr inż. Aleksander Perliński dr inż. Natalia Korcz-Konkol dr inż. Tomasz Heizig					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	10.0	10.0	0.0	40
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	40	0.0		0.0		40
Subject objectives	Familiarization with loads, load-bearing systems and structural solutions of steel warehouses. Preparation of design documentation for selected elements of the steel structure of the warehouses. Familiarization with welding techniques.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U03] Design engineering objects and details, processes and engineering systems by applying appropriate standards and methods of design.	Is able to design the main elements of a steel hall using current standards. Knows welding processes.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W03] Demonstrate knowledge and understanding of the processes, established standards and design methods in the civil engineering subject area and of their limitations.	Knows and understands the guidelines of actual design codes used in the design of steel halls.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U07] Design and build engineering structures in a sustainable manner, with care for the natural environment and a minimum carbon footprint	Knows and applies optimal construction solutions in design.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W07] Understand the investment's impact on the environment and the interrelationships and dependencies between the building structure and the natural environment	Knows the relationship between building geometry and climatic loads.			[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	Design of a single bay hall with a steel structure with purlins, lattice girder and I-shaped columns - calculation of loads, static calculations using computer software, dimensioning of the main structure elements, preparation of selected construction drawings.						

Prerequisites and co-requisites	Student knows the main rules of dimensioning of individual elements of steel structures as well as welded and bolted connections, which he acquired during the course "Metal Structures I".		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written test from the laboratory	60.0%	20.0%
	Written test from lectures	60.0%	40.0%
	Design of the warehouse and colloquium	60.0%	40.0%
