

## Subject card

Subject name and code	Non Destructive Testing , PG_00056978							
Field of study	Civil Engineering							
Date of commencement of studies	October 2021		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group					
Mode of study	Part-time studies		Mode of delivery			at the university		
Year of study	4		Language of instruction			Polish		
Semester of study	8		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department of Engineering Structures -> Faculty of Civil and Environmental Engineering							
Name and surname	Subject supervisor	dr inż. Dariusz Kowalski						
of lecturer (lecturers)	Teachers							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	:t	Seminar	SUM
of instruction	Number of study hours	20.0	20.0	0.0	0.0		0.0	40
	E-learning hours inclu	uded: 0.0						
	Exercise in the form of stationary laboratory classes in a dedicated laboratory							
Learning activity and number of study hours	Learning activity	Participation i classes including		Participation in consultation hours		Self-st	tudy	SUM
	Number of study hours	40		0.0		0.0		40
Subject objectives	The aim of the course is to acquaint students with the methods of inspection and evaluation of metal structures under applicable acceptance standards. In class, students learn methods and techniques to identify flaws and inconsistencies in the welded joints. Methods for evaluating the correctness of the screw connections. Students will be familiarized with the rules for the implementation of technical descriptions and specifications for the construction of metal							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
[K6_K05] can work on hi and in a team to solve a			The student knows the principles of division of tasks and responsibilities at the stage of design, manufacture, control and operation of the structure; knows how to assign tasks to individual stages; knows the relationships and responsibilities			[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills		
	[K6_U17] has specialized skills in civil engineering within offered specialization		The student knows how to use measuring and research tools, knows their applications, working methods, limitations that affect the test result and assessment			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	[K6_W16] Has deeper adequate knowlege of engineering, within of specialization	Student acquainted with the commonly used methods of nondestructive testing of metallic structures,			[SW1] Assessment of factual knowledge

Program content lecture classes:					
Organizational meeting, getting to know the content object, the terms of credit. Quality requirements, assembly, research NDT, etc. included in the building project. The welding process as a source of . Classification of non-compliance of welded joints of metal structures. Acquainted with the testing methods: VT - Visual Testing of welded joints; PT - Penetrant testing of welds; MT - Magnetic studies of welded joints; RT - Radiographic examination of welded joints; UT - Ultrasonic testing of welded joints. Other techniques for testing and inspection of metal structures. Legal requirements relating to the technical description of the project and the technical specifications. Technical Description and technical specifications for the design of steel structure, the necessary studies. Regulations and standards for the reception of metal. Condition technical performance and acceptance of metal structures. Quality assurance systems in the construction of metal structures. Plans Audit and Research for the objects implemented in the technology of metal structures. Examination lecture / lab - final test.					
Introduction - the purpose of teaching the subject. Terms pass the course. The organization of the laboratory. The division into groups laboratory. Metrology - measurements of geometric features elements using various gauges. Visual Testing VT - Determination of dimensions of welded joints (Fillet Gauge, protractor). Visual Testing VT - Discrepancies welded joints. PT penetrant testing, magnetic studies MT. X-rays RT - slideshow welded joints. Ultrasonic testing UT - thickness measurements using gages. Ultrasonic testing UT - use flaw - patterns. Ultrasonic flaw detector UT- use - artificial defects, discrepancies in real samples of welded joints. Research anticorrosion coatings. Technical description of the design of metal structures. Technical specifications for the design of metal structures. Overview prepared by the students of the technical specifications. Final test.					
Knowledge of the design and production of construction of metal structures  Knowledge of the techniques and welding processes used in building engineering					
final test	60.0%	100.0%
