

Subject card

Subject name and code	Operation and safety of nuclear power plants, PG_00065897						
Field of study	Nuclear Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Minkiewicz				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	15.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		30.0	100
Subject objectives	The aim of the course is to provide the student with knowledge in the field of nuclear power plant operation, security and safety. During the course, the student will learn about aspects related to the construction and operation of a nuclear power station (with particular focus on electrical systems) as well as issues concerning nuclear power plant safety and selected systems responsible for its safe operation.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U11] communicates and justifies opinions on specialized topics in a manner understandable to diverse audiences, including the use of modern techniques, including information technology		The student presents a presentation on a topic related to the scope of the subject.		[SU1] Assessment of task fulfilment		
	[K7_U02] formulates and tests hypotheses concerning problems related to processes occurring in Nuclear Power Technologies, their efficiency, rationality, operation, safety and impact on the environment, as well as simple research problems		The student performs laboratory tasks by formulating and verifying hypotheses related to the operation of a nuclear power plant		[SU1] Assessment of task fulfilment		
	[K7_W01] explains and describes, based on general knowledge in the field of scientific disciplines forming the theoretical foundations of Nuclear Power Technologies, the physics of processes, structure, principle of operation, operation, safety aspects, fuels and materials for reactors, systems, machines and devices of a nuclear power plant		The student defines and describes processes related to the operation, security and safety of nuclear power plants.		[SW1] Assessment of factual knowledge		
	[K7_U14] integrates information obtained from literature and other properly selected sources, including those in a foreign language, creatively interpreting and critically evaluating them, and drawing conclusions		The student reviews relevant literature and prepares a presentation on a topic related to the scope of the course.		[SU1] Assessment of task fulfilment		

Subject contents	<p>Lecture: Construction of nuclear power plants (general issues). Commissioning of nuclear power plants. Selected topics related to the operation of nuclear power plants (including current operational data of nuclear units worldwide, thermal cycles, calculation of electric power and energy generation efficiency). Maintenance and repairs of selected equipment operating in nuclear power plants. Electrical systems of nuclear power plants (including electrical schematics, electric generators used in nuclear power plants, and power station internal load). Operation of nuclear power plants in the power system. Potential adaptation of nuclear power plants for cogeneration. Management of radioactive waste and spent nuclear fuel during nuclear power plant operation. Emissions and releases of radioactive substances during normal nuclear power plant operation. Nuclear power plant safety (including IAEA requirements, safety principles, facility protection and characteristics of selected safety systems). Decommissioning of nuclear power plants (general issues).</p> <p>Laboratory: Computer-based calculations related to the operation of nuclear power plants. Presentation and application of software tools provided by the International Atomic Energy Agency (IAEA).</p> <p>Seminar: Expansion of topics covered during the lecture (including issues related to accidents that have occurred in nuclear power plants - causes, progress and consequences).</p>		
Prerequisites and co-requisites	General knowledge of the structure and operation of the power system and thermal power plants. Knowledge of basic physics (basic laws of physics, physical quantities and their units and measures, mechanics, electrical engineering, thermodynamics, heat transfer), mathematics (algebra, geometry, trigonometry, differential and integral calculus) and energy processes' properties (efficiency of single conversion, efficiency of conversion cycle and thermodynamic cycle efficiency)		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	60.0%	50.0%
	Presentation	60.0%	20.0%
	Laboratory reports	60.0%	30.0%
