| Subject objectives                          | Introducing students to the renewable energy sources   |  |   |                                     |                               |                        |         |     |  |
| Learning outcomes                           | Course outcome   |  | Subject outcome                         |                                     |                               | Method of verification |         |     |  |
|   | Characteristics and estimation of conventional energy resources and their impact on environmental contamination. Presentation of the types, resources and possibilities of using environmentally friendly renewable energy sources, such as: hydropower (energy of water flow, energy of water level differences, wave energy, tidal energy, energy of currents); solar energy (low-temperature and high-temperature solar energy systems, active and passive systems, decentralized systems, centralized systems, solar collectors, photovoltaic cells); wind energy (lifting force, onshore and offshore wind farms); geothermal energy (geothermal energy resources, geothermal plants, heat pumps); solid, liquid and gas biofuels (energy wood, straw, biodiesel, bioethanol, biomethanol, biohydrogen, biogas, wood gas). Energy storage as a way to make renewable energy sources independent of the weather (technologies of mechanical, electrochemical, electrical, chemical and thermal energy storage, hydrogen energy, galvanic cells, fuel cells, electrochemical capacitors). |  |   |                                     |                               |                        |         |     |  |
| Prerequisites                               |  |  |   |                                     |                               |                        |         |     |  |
| and co-requisites                           |  |  |   |                                     |                               |                        |         |     |  |
| Assessment methods                          | Subject passin   | Passing threshold                          |   |                                     | Percentage of the final grade |                        |         |     |  |
| and criteria                                | Test   |  | 60.0%                                   |                                     |                               | 100.0%                 | 6       |     |  |
