Subject objectives

Teaching students the basic knowledge and practical skills in the field of Geographic Information Systems (GIS), which includes both the use of GIS software as well as acquisition and processing of geographic data.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U05] formulates and tests hypotheses related to engineering problems and simple research problems concerning environmental protection, the use of new environmental protection technologies and analytical procedures	Student knows how to use various GIS tools to conduct and visualize results of a spatial data analysis.	[SU4] Assessment of ability to use methods and tools
[K7_W02] has knowledge of protecting soil, air and water from pollution	Student learns methods of air, soil and water pollution monitoring and simulation using GIS tools.	[SW1] Assessment of factual knowledge
[K7_U03] solves design tasks in the field of environmental protection technologies, taking into account their non-technical, environmental, economic and legal aspects as well as occupational health and safety principles	Student can use GIS tools to analyse spatial data from various sources.	[SU4] Assessment of ability to use methods and tools
[K7_K01] is aware of the problems related to the profession of engineer, is able to assess the effects of the activities performed	Student can select the proper GIS tool to complete a given task.	[SK2] Assessment of progress of work
