

Subject card

Subject name and code	Electromagnetic Interference in Automation Systems, PG_00036794						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jarosław Łuszcz				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	The aim of the course is to provide knowledge about causes of electromagnetic interference in automation systems and methods for its mitigation.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U07		uses analytical and simulation methods to solve engineering tasks.		[SU3] Assessment of ability to use knowledge gained from the subject		
	K7_W06		acquires knowledge from available sources in the field of electromagnetic interference		[SW1] Assessment of factual knowledge		
	K7_U03		prepares a presentation on a selected topic related to disturbances in automation systems		[SU5] Assessment of ability to present the results of task		
	K7_U04		acquires knowledge from available sources in the field of electromagnetic interference		[SU2] Assessment of ability to analyse information		
	K7_W11		uses computer tools to design automation systems.		[SW1] Assessment of factual knowledge		
Subject contents	<p>LECTURE</p> <p>Sources and propagation of conducted and radiated electromagnetic disturbances.</p> <p>Electromagnetic emission and immunity of electrical devices.</p> <p>Typical causes of interference in control and automation systems.</p> <p>Selected methods of reducing electromagnetic interference in automation systems.</p> <p>Analysis of typical problems related to interference with electrical devices.</p> <p>LABORATORY</p> <p>Measurements of conducted and radiated electromagnetic interference levels.</p> <p>Testing the immunity of devices to electromagnetic interference.</p> <p>Presentation of the effectiveness of selected interference reduction methods.</p> <p>Presentation of examples of interference in analog and digital systems.</p> <p>Presentation of examples of mutual interference between electronic devices.</p>						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture reports	50.0%	50.0%
	Task report	50.0%	50.0%
