

Subject card

Subject name and code	Systems of Geographical Information in Transport, PG_00040988						
Field of study	Transport						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Adam Inglot				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Presentation of the possibilities of using GIS in transport as a modern data processing tools. Presentation of data acquisition methods. GIS support in investments.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W04] analyzes complex problems in-depth based on reliable data and properly selected methods, obtaining logical solutions		Learns GIS spatial analysis tools related to transportation.		[SW3] Assessment of knowledge contained in written work and projects		
	[K7_W06] identifies reliable sources of information relevant to the analyzed issues		He learns about data sources and how to assess their reliability and suitability for spatial analysis.		[SW3] Assessment of knowledge contained in written work and projects		
	[K7_U03] formulates research problems and selects appropriate analytical methods for their effective solution, using advanced IT tools, and critically evaluates the obtained results		Able to perform simple spatial data analysis in transportation-related tasks.		[SU5] Assessment of ability to present the results of task		
	[K7_K02] makes competent and ethical decisions, caring for the public interest and maintaining economic, social and environmental values		Can make computer graphics with a map component poraz descriptive elements.		[SK5] Assessment of ability to solve problems that arise in practice		
Subject contents	Coordinate systems; Reference systems; Data in GIS; Generalizing; Color attributes; Directive INSIRE, GIS - road analyzes, Implementation of road geoinformation systems						
Prerequisites and co-requisites	ability to use object programs						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	verification		60.0%		70.0%		
	the presentation		80.0%		30.0%

	Supplementary literature	Articles from magazines: IET INTELLIGENT TRANSPORT SYSTEMS; TRANSPORTATION PLANNING AND TECHNOLOGY, TRANSPORTATION RESEARCH PART A-POLICY AND PRACTICE
	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	Data entry methods; Characterize the differences between a raster map and a vector map; Name and describe standards for storing environmental data in the GIS system; Types of generalization; Marks on the map and their features; Characterize the colour attributes.	
Work placement	Not applicable	

Document generated electronically. Does not require a seal or signature.
