

GDAŃSK UNIVERSITY

Subject card

Subject name and code	Electronagnetic Interference in Automation Systems, PG_00057619									
Field of study	Electrical Engineering									
Date of commencement of studies	October 2024		Academic year of realisation of subject			2024/2025				
Education level	second-cycle studies		Subject group							
Mode of study	Part-time studies		Mode of delivery			at the university				
Year of study	1		Language of instruction			Polish				
Semester of study	2		ECTS credits			2.0				
Learning profile	general academic profile		Assessment form			assessment				
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering									
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jarosław Łuszcz							
	Teachers		dr hab. inż. Jarosław Łuszcz							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory Project		t	Seminar	SUM		
of instruction	Number of study hours	10.0	0.0	10.0	0.0		0.0	20		
	E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM		
	Number of study hours	20		5.0		25.0		50		
Subject objectives	The aim of the course is to provide knowledge about causes of electromagnetic interference in automation systems and methods for its mitigation.									
Learning outcomes	Course outcome		Subject outcome			Method of verification				
	[K7_W06] has in-depth knowledge of industrial electronics, microprocessor control systems, programmable logic systems and printed circuit design and prototyping computer-aided prototyping		applies systematized knowledge in the scope of the problems of diagnosing disturbances in automation systems			[SW1] Assessment of factual knowledge				
	[K7_U03] is able to obtain information from literature, databases and other sources, also in English, draw conclusions, formulate and fully justify opinions. substantiate opinions; is able to identify directions for further learning and implement the process of self-education		acquires knowledge from available sources in the field of electromagnetic interference			[SU4] Assessment of ability to use methods and tools				
	[K7_U02] is able to prepare and deliver a short oral presentation on a selected technical topic		prepares a presentation on a selected topic related to interference in automation systems			[SU5] Assessment of ability to present the results of task				
	[K7_W02] has an in-depth and structured knowledge of electrical measurements electrical measurements, the methods and equipment used for electrical measurements of non-electrical quantities, he/she knows the principles of testing operation tests of electrical equipment, has a structured knowledge of electricity quality issues		applies systematized knowledge in the field of electromagnetic disturbances			[SW1] Assessment of factual knowledge				

Subject contents	LECTURE Sources and propagation of conducted and radiated electromagnetic disturbances. Electromagnetic emission and immunity of electrical devices. Typical causes of interference in control and automation systems. Selected methods of reducing electromagnetic interference in automation systems. Analysis of typical problems related to interference with electrical devices. LABORATORY Measurements of conducted and radiated electromagnetic interference levels. Testing the immunity of devices to electromagnetic interference. Presentation of the effectiveness of selected interference reduction methods. Presentation of examples of interference in analog and digital systems. Presentation of examples of mutual interference between electronic devices.						
Prerequisites and co-requisites							
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Lab reports	50.0%	50.0%				
	Colloquium from the lecture	50.0%	50.0%
