GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	, PG_00066213						
Field of study	Transport						
Date of commencement of studies	February 2024		Academic year of realisation of subject	2024/2025			
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery	at the university			
Year of study	2		Language of instruction	Polish			
Semester of study	3		ECTS credits	3.0			
Learning profile	general academic profile		Assessment form	assessment			
Conducting unit	Department of Transportation Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. arch. Romanika Okraszewska				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study	SUM	
	Number of study hours	45		0.0	0.0	45	
Subject objectives	The aim of the subject Ecological aspects in the development of transport is to understand and analyze the impact of transport on the natural environment and the relationship with ongoing climate change. The subject discusses global and local actions to combat climate change. 1. Understanding the impact of transport on the environment Transport is one of the main sources of greenhouse gas emissions and air pollution. Students learn about the negative impact of transport on the environment, including air, water and soil pollution, landscape, as well as noise and vibrations generated by vehicles. 1. Learning about ecological solutions in transport Students learn about various ecological solutions in transport, such as electric vehicles, international transport of goods by rail, or autonomous technologies. Innovations in ecological transport are also discussed, such as the use of solar energy to power vehicles. 1. Understanding the importance of ecologistics in transport Ecological logistics in transport are actions taken by companies from the TSL sector to reduce the negative impact of logistics on the natural environment. Students learn about the importance of sustainable transport development, which involves using available resources in the most optimal way possible, maximizing the efficiency of logistics operations. 1. Analysis of the benefits of ecological solutions in transport Students analyze the benefits of implementing ecological solutions in transport, such as reducing CO2 emissions, saving fuel and maintenance costs, as well as image benefits for companies.							

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W02] explains the importance and interdependence of key components describing transport systems and processes and their environment, using in-depth knowledge in accordance with the main trends in the development of scientific disciplines related to the field of study	The student has in-depth knowledge about possible actions to limit the negative effects of transport on the environment.	[SW2] Assessment of knowledge contained in presentation
[K7_K02] makes competent and ethical decisions, caring for the public interest and maintaining economic, social and environmental values	The student is able to use appropriate methods to determine the impact of an institution/facility/ area/event on the environment and propose actions to limit the adverse impact	[SK5] Assessment of ability to solve problems that arise in practice
[K7_U01] creates innovative solutions to complex and unstructured problems, taking into account the variability of the environment by synthesizing information from many sources, using analytical, simulation and experimental methods	The student is able to assess the strength of the negative impact on the environment and propose actions to limit the negative impact	[SU4] Assessment of ability to use methods and tools

Subject contents

1. Background of ecological problems from transport
2. Global actions to combat climate change
3. Carbon footprint management
4. Promotion of alternative forms of transport
5. Adaptation and mitigation of climate change in transport
6. Solutions reducing transport emissions in the city
7. Electromobility
8. Efficient use of resources
9. Innovative technologies
10. Protection of biodiversity
11. Noise reduction
12. Sustainable spatial planning
13. Mobility management
14. Promoting eco-driving

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Lecture	60.0%	50.0%
Project	60.0%	25.0%
Laboratory	60.0%	25.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	1. Compare CO2 emissions for individual means of transport (plane, train, combustion engine car, electric car, bicycle) over an analogous distance and in analogous conditions. 2. What determines the amount of CO2 emissions from motor vehicles? 3. What is mitigation, and what is its significance in the context of climate change? 4. Provide examples of adaptation to climate change in transport.
