

Subject card

Subject name and code	OPERATIONAL RESEARCH, PG_00066497						
Field of study	Economic Analytics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Management Engineering and Quality -> Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Jolanta Łopatowska					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	Recognizes problems in the organization, formulating quantitative models allowing for making rational decisions.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W05] Possesses advanced knowledge of data integration from multiple sources and advanced analytical methods, enabling the analysis of complex economic problems.		Solves problems using optimization tools, integrating data from many areas of the organization's operation.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] Designs innovative solutions to challenging problems by applying knowledge from the field of economic analytics, achieving economically and socially valuable outcomes.		Selects mathematical models, assessing their usefulness and effectiveness in business practice.		[SU4] Assessment of ability to use methods and tools		
Subject contents	The basic problems of operations research - the essential features and the structure of the decision situation. The general form of linear optimization model, interpretation and sensitivity analysis of the solution. Construction of linear optimization models - assortment selection model, cutting model, technological process optimization model, transport model, assignment model of mutually replaceable resources. Graphic method, simpleks algorithm. Dual linear optimization model. The integer numerical optimization model. Elements of nonlinear programming. Multi-criteria models. Elements of graph theory. CPA, CPM, PERT, CCPM methods. Ford-Fulkerson algorithm. Sequential issue. Elements of dynamic programming.						
Prerequisites and co-requisites	Mathematics						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	midterm colloquium		60.0%		50.0%		
	exam		60.0%		50.0%
