

Subject card

Subject name and code	ECONOMETRICS, PG_00066523								
Field of study	Economic Analytics								
Date of commencement of studies	October 2024		Academic year of realisation of subject			2025/	2025/2026		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Part-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	4		ECTS credits			5.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Statistics and Econometrics -> Faculty of Management and Economics								
Name and surname	Subject supervisor		dr hab. Michał Pietrzak						
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	16.0	0.0	16.0	0.0		0.0	32	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation i consultation h		Self-study		SUM	
	Number of study hours	32		6.0		87.0		125	
Subject objectives	Creates econometric models to analyze economic processes.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
			analyzes cause and effect relationships occurring in economic processes			[SW3] Assessment of knowledge contained in written work and projects			
	[K6_U05] Designs innovative solutions to challenging problems by applying knowledge from the field of economic analytics, achieving economically and socially valuable outcomes.		recognizes methods used for estimation and verification of econometric models, choosing the method to fit the defined problem			[SU4] Assessment of ability to use methods and tools			
Subject contents Prerequisites	An econometric model and its components. Simple and multiple regression. Steps in building an econometric model. Specification of econometric model. Parameter estimation of linear econometric model. Method of least squares (LSM) estimation of linear econometric model. Stochastic assumptions in an econometric model. Economic verification of an econometric model. Statistical verification, assessment of the degree of model fit and testing of stochastic properties of the model. Estimation of a linear regression model using the method of moments and maximum likelihood. Multiplicative models - properties and methods of estimating parameters. Autocorrelation property of the random component - causes, effects, measurement, testing and methods of removing causes. Heterocedasticity of a random component. Generalized least squares method (GLS). Parameter estimation under autocorrelation and heteroskedasticity of the random component. Cause and effect compatible model. Econometric forecasting based on an econometric model. mathematics, macroeconomics, microeconomics, statistics, mathematical statistics								
Prerequisites and co-requisites	matilematics, macioe	oonomics, mic	iocconomics, s	nausuos, maur	cmalica	i sidiisli			

Data wygenerowania: 02.04.2025 10:04 Strona 1 z 2

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	colloquium (lab)	60.0%	50.0%			
	exam	60.0%	50.0%

Example issues/ example questions/ tasks being completed	Consider the following inflation model: inft = 8,0 +0,6inft-1 -0,7 rt +t, where: inft annual inflation in period t (in%), rt real interest rate at the beginning of period t (in%). Identify the short-term effect of the impact of the interest rate on the level of inflation and the time-lagged inflation level.					
Work placement	Not applicable
