

Subject card

Subject name and code	, PG_00066700						
Field of study	Technical Physics						
Date of commencement of studies	February 2025	Academic year of realisation of subject				2024/2025	
Education level	second-cycle studies	Subject group				Specialty subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Institute of Physics and Applied Computer Science -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Michał Piłat					
	Teachers	dr inż. Michał Piłat					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	The aim of the course is to familiarize students with the basics of descriptive statistics with particular emphasis on techniques used in data science. The course will present the mathematical foundations of statistics and methods of implementing them in the Python programming language within built-in libraries such as Numpy, Scipy, Sympy, Pandas and Matplotlib. The effects of education are to be knowledgeable of basic statistical concepts, the ability to use statistical tools for analytical purposes and methods of implementing them in programming systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U06] can apply obtained knowledge of physics to exact sciences, natural and technical sciences	Student can perform the analysis of data describing, for example, medical results, population of a chosen region.			[SU4] Assessment of ability to use methods and tools		
	[K7_U05] can plan and conduct theoretical calculations, experimental research and computer simulations, critically analyze their results, draw conclusions and form reasoned opinions	Student can describe a given set of data using statistical methods and perform an analysis of data by using special libraries implemented in Python.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_W03] has knowledge of current development paths and discoveries in the scope of physics and related fields of science and technology	Student has knowledge on basic concepts of statistics and programming technics in Python.			[SW1] Assessment of factual knowledge		

Subject contents	<p>Exploratory data analysis</p> <ul style="list-style-type: none"> • Estimates of location • Estimates of variability • Exploring the data distribution • Exploring binary and categorical data • Correlation • Exploring two or more variables <p>Data and sampling distribution</p> <ul style="list-style-type: none"> • Differences between sample and population • Types of discrete distributions • Types of continuous distributions • Confidence intervals <p>Statistical experiments and significance testing</p> <ul style="list-style-type: none"> • Hypothesis tests • Statistical significance • Errors of I and II kind • Chi-square test <p>Regression and prediction</p> <ul style="list-style-type: none"> • Linear regression • Polynomial regression • Multiple linear regression • Regression diagnostics <p>Classification</p> <ul style="list-style-type: none"> • Naive Bayes • Discriminant analysis • Logistic regression • Evaluating Classification Models <p>Statistical machine learning</p> <ul style="list-style-type: none"> • K-nearest neighbours • Tree models <p>Unsupervised Learning</p> <ul style="list-style-type: none"> • Principal Components Analysis • K-means clustering 											
Prerequisites and co-requisites	<p>Basics of programming in Python</p> <p>Basics of calculus and linear algebra.</p>											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="453 1426 794 1458">Subject passing criteria</th> <th data-bbox="794 1426 1139 1458">Passing threshold</th> <th data-bbox="1139 1426 1474 1458">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 1458 794 1489">Project</td> <td data-bbox="794 1458 1139 1489">50.0%</td> <td data-bbox="1139 1458 1474 1489">50.0%</td> </tr> <tr> <td data-bbox="453 1489 794 1520">Test</td> <td data-bbox="794 1489 1139 1520">50.0%</td> <td data-bbox="1139 1489 1474 1520">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Project	50.0%	50.0%	Test	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Project	50.0%	50.0%										
Test	50.0%	50.0%
