

Subject card

Subject name and code	Mathematical Analysis I, PG_00052404						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Mathematics Center -> Vice-Rector For Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Robert Fidytek				
	Teachers		dr Robert Fidytek mgr inż. Dorota Żarek mgr Jolanta Fidytek				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		6.0		84.0	150
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n- selection and application of appropriate methods and toolsn	Student applies the basic rules and techniques of integration to calculate indefinite and definite integrals. Student uses definite integrals to solve geometrical tasks. Student analyses properties of a given function of two variables using differential calculus of several variables functions. Student calculates double and triple integrals and uses them in geometrical problems. Student applies the basic rules and techniques of integration to calculate indefinite and definite integrals. Student uses definite integrals to solve geometrical tasks. Student analyses properties of a given function of two variables using differential calculus of several variables functions. Student calculates double and triple integrals and uses them in geometrical problems. Student uses Laplace transform.	[SU4] Assessment of ability to use methods and tools
	[K6_W01] knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study	Student defines basic notions of differential calculus of several variables function and integral calculus of one and several variables functions. Student defines basic notions of differential calculus of several variables function and integral calculus of one and several variables functions.	[SW1] Assessment of factual knowledge
Subject contents	Indefinite integrals and their properties Integration formulas. The integration-by-parts formula. The substitution method of integration. Integration of rational functions. Integration of trigonometric functions. Integration of irrational functions. Methods of evaluations of definite integrals. Applications of definite integrals. Improper integrals. Applications of improper integrals. Functions of several variables. Definitions, examples. Limits of several variables functions. Partial derivatives. Extreme values of several variables functions. Double integrals over rectangles and normal domains. Two dimensional change of variables theorem. Applications of double integrals. Triple integrals over cuboids and normal domains. Three dimensional change of variables theorem. Applications of triple integrals. Complex functions. Derivatives and the Cauchy-Riemann equations. Complex integrals. Laplace transform.		
Prerequisites and co-requisites	Knowledge of "Basic mathematics"		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Activity	50.0%	10.0%
	Colloquium	50.0%	30.0%
	Final exam	50.0%	60.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	1. Find the area of the surface obtained by the rotation of the arc $y = e^{-x}$ around the OX-axis for x from $x_1 = 0$ to $x_2 = \ln 2$. 2. Compute partial differentials of the second order for the given function $f(x,y) = x^3 \arctg(xy^2)$. 3. Find extreme values of the function $f(x,y) = e^{2y}(x^2 - y^2)$. 4. Compute the double integral of the given function $f(x,y) = \ln(1 + x^2 + y^2)$ over the region $D: x^2 + y^2 \leq R^2, x \geq 0, y \geq 0$. 5. Using cylindrical or spherical coordinates evaluate the triple integral for the function $f(x,y,z) = z(x^2 + y^2)^{1/2}$ over the region $V: x = 0, x = y, x^2 + y^2 = 9, x^2 + y^2 = 4, z = 0, z = 1$.
