GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Modelling and Simulation of Electronic Systems, PG_00048098		
Field of study	Electronics and Telecommunications		
Date of commencement of studies	October 2025	Academic year of realisation of subject	2028/2029
Education level	first-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	4	Language of instruction	Polish
Semester of study	7	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department Of Metrology And Optoelectronics -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Michał Kowalewski	
	Teachers	dr inż. Michał Kowalewski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	2.0	18.0	50

Subject objectives

A course teaches students model building skills, that is representing some aspects of the real world by numbers or symbols which may be easily manipulated to facilitate the study of the dynamics of existing or hypothesized systems at a reduced cost.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	In Matlab and Simulink, student constructs and researches models of analogue-to-digital converters: successive approximation, integration, sigma-delta modulator. Investigates model of generator with automatic amplitude control loop, model of van der pole oscillator. Models nonlinear systems using piecewise-linear approximation.	[SU4] Assessment of ability to use methods and tools

Subject contents

1. Introduction 2. Modelling of linear continuous circuits, topological formulation of algebraic network equations 3. Modeling of linear continuous systems: transfer function models and state-space approach 4. Modelling discrete time systems 5. Block diagram reduction and manipulation rules 6. Behavioural modelling in Matlab environment 7. Modelling of non-linear circuits by piecewise-linear method 8. Creation of hierarchical models, using the debugger and accelerator, creating masked blocks, interactive simulation, running a batch of simulations in Simulink 9. Libraries of standard Simulink blocks: linear, non-linear, discrete, sources, sinks 10. Libraries: mathematical operations, function and tables, signals and systems 11. Variable-step and fixed-step solvers of sets of ordinary differential equations 12. Practical examples: model of succesive approximation ADC 13. Model of dual-slope integration ADC 14. Model of sigma-delta converter 15. Colloquium

Prerequisites and co-requisites

No requirements

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Laboratory	50.0%	40.0%
Midterm colloquiums	50.0%	60.0%
