

## Subject card

Subject name and code	Natural Language Processing, PG_00063901						
Field of study	Informatics						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2026/2027		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department Of Intelligent Interactive Systems -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jan Daciuk				
	Teachers		dr hab. inż. Jan Daciuk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		6.0		39.0	75
Subject objectives	The purpose of this subject is to familiarize students with basic techniques used in natural language processing and to to prepare them for work on development of applications for that domain.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Can use acquired knowledge to develop natural language processing software.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Knows and understands principles and methods for building dictionaries, morfological analysis and synthesis, part-of-speech tagging, parsing and semantic analysis.	[SW1] Assessment of factual knowledge
	[K7_U12] is able, to an increased extent, to analyze the operation of components and systems related to the field of study, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to the field of study, including computer simulations, interpret the obtained results and draw conclusions	s able, to an increased extent, to analyze the operation of components and systems related to natural language processing, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to natural language processing, interpret the obtained results and draw conclusions	[SU1] Assessment of task fulfilment
	[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	knows and profoundly understands basic processes in life cycle of devices, objects, and technical systems as well as methods for supporting processes and functions specific for natural language processing	[SW1] Assessment of factual knowledge
Subject contents	<b>Lecture:</b> <ol style="list-style-type: none"> <li>1. Introduction, segmentation.</li> <li>2. Morphology: concatenation.</li> <li>3. Morphology: spelling rules.</li> <li>4. Morphological analysis, lexicon as an automaton.</li> <li>5. Incremental construction of lexicons, perfect hashing.</li> <li>6. Spelling correction with automata.</li> <li>7. Spelling correction: noisy channel model.</li> <li>8. Document retrieval.</li> <li>9. Tagging.</li> <li>10. Syntax description methods.</li> <li>11. Parsing with unification.</li> <li>12. Representation of meaning.</li> <li>13. Syntax-driven semantic analysis.</li> <li>14. Dialogue.</li> <li>15. Word sense disambiguation.</li> </ol> <b>Project:</b> <ol style="list-style-type: none"> <li>1. Linux/Unix tools for text processing.</li> <li>2. Morphology.</li> <li>3. Segmentation.</li> <li>4. Document retrieval.</li> <li>5. Syntax and semantics.</li> </ol>		
Prerequisites and co-requisites	Programming skills (mainly arbitrary scripting languages), understanding Prolog programs.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	50.0%	50.0%
	project	50.0%	50.0%
