

Subject card

Subject name and code	Media Processing in Decision-Making Systems, PG_00063919							
Field of study	Informatics							
Date of commencement of studies	February 2026		Academic year of realisation of subject		2026/2027			
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the	at the university		
Year of study	1		Language of instruction		Polish	Polish		
Semester of study	2		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department Of Multimedia Systems -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej							
Name and surname	Subject supervisor		prof. dr hab. inż. Andrzej Czyżewski					
of lecturer (lecturers)	Teachers		dr hab. inż. Piotr Szczuko dr inż. Arkadiusz Harasimiuk mgr inż. Szymon Zaporowski dr inż. Sebastian Cygert					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		4.0		26.0		75
Subject objectives	The aim of the lectur adaptively learn, inte the field of multimedi Among the applicatio discussed and illustra	rpret possible v a technologies ons, object dete	ariants of obje with particular ction, autonom	cts or patterns emphasis on p	, e.g. sca processir	ale, orieng	entation and pands, images a	perspective in and noisy data.

Learning outcomes	Course outcome	Subject outcome	Method of verification			
	[K7_W02] knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	Posesses extended knowledge of algorithms for learning distance metrics, learning in computer vision, knows the specific phenomena occurring in the recognition of sounds and images, understands the impact of noise on the effectiveness of their analysis and processing.	[SW1] Assessment of factual knowledge			
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Can apply boosted decision trees, and train neural networks using multimedia data. Knows the design principles of systems that collect, analyze, process and recognize multimedia data. Distinguishes between machine learning methods and in particular neural networks used for multimedia data processing.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools			
	[K7_W101] is able to make an indepth identification of key objects and phenomena related to the field of study, as well as theories that describe them and applicable analytical and design methods	He is familiar with the cloud approach, how to create and organize services from the field of machine learning and artificial intelligence. He can model objects in an image. Is familiar with the concepts of segmentation, determination of regions of interest. Knows basic techniques for analyzing multimodal medical, biometric data and understands information analysis methods used for vehicle autonomization.	[SW1] Assessment of factual knowledge			
	[K7_U12] is able, to an increased extent, to analyze the operation of components and systems related to the field of study, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to the field of study, including computer simulations, interpret the obtained results and draw conclusions	He is able to refer to scientific sources in the field of modern methods and technologies, as well as to propose trends in the development of methods and principles of multimedia data acquisition and their use in machine learning, if necessary modifying them accordingly in the the course of the implementation of engineering projects, and apply the relevant principles of security of access to the data used.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment			
Subject contents	Lectures: 1 Reinforcement decision trees in applications 2 Overview of algorithms that learn distance metrical 3 Multitasking learning in computer vision 4 Object detection (object detection, keypoints detection, 3D detection). Applications in autonomous vehicles and/or medicine. 5 Semantic segmentation (semantic segmentation, instance segmentation). Applications in autonomous vehicles and / or in medicine. 6 IoT as data source for ML/AI 7 ML/AI in cloud approach, ML/AI services offered by vendors 8 Practical aspects of using machine learning algorithms (criticism of modern machine learning algorithms, examples of wrong predictions, safety in AI) 9 ML/AI in the automotive area, use of multimedia information sources for autonomization of vehicles - cars and agro equipment. 10 Applications of machine learning in biometrics					
	Labs 1 Discussion of lab principles, practices used, data sources, tools 2 Reinforcement decision trees in applications 3 Algorithms learning distance metrics 4 Multitasking learning in computer vision 5 Object detection (object detection, keypoints detection, 3D detection). Applications in autonomous vehicles. 6 Semantic segmentation (semantic segmentation, instance segmentation). Applications in medicine. 7 Intepretability of artificial intelligence methods. Decision visualization methods for neural networks. 9 ML/A in cloud approach, ML/AI services offered by vendors 10 Applications of machine learning in biometrics.					
Prerequisites and co-requisites	The student should have knowledge artificial intelligence methods, have p
