

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Modern Techniques in Control Theory, PG_00064102							
Field of study	Automatic Control, Cybernetics and Robotics							
Date of commencement of studies	February 2026		Academic year of realisation of subject		2025/2026			
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	1		Language of instruction		Polish			
Semester of study	1		ECTS credits		4.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department Of Automatic Control -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Artur Gańcza					
	Teachers		dr inż. Artur Gańcza					
			dr inż. Piotr Fiertek					
			mgr inż. Krzysztof Dudziak					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	Project Sen		SUM
	Number of study hours	30.0	15.0	0.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		6.0		49.0		100
Subject objectives	Advanced control methods, in particular for MIMO plants: state-space control, robust control. Know fundamental limitations of control systems.							

Learning outcomes	Course outcome	Subject outcome	Method of verification					
	[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	The student understands basics of modeling.	[SU3] Assessment of ability to use knowledge gained from the subject					
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science	The student can model dynamic system using state space equations and transfer function matrices. The student knows the concepts of MIMO zeros, decoupling zeros, poles, directions. The student can specify uncertainty.	[SW1] Assessment of factual knowledge					
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	The student can implement a simulated control system that employs advanced controllers discussed during the course.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools					
	[K7_U12] is able, to an increased extent, to analyze the operation of components and systems related to the field of study, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to the field of study, including computer simulations, interpret the obtained results and draw conclusions	The student understands the application areas, advantages and disadvantages of different control approaches discussed in the course. The student can model dynamic system using state space equations and transfer function matrices. The student knows the concepts of MIMO zeros, decoupling zeros, poles, directions. The student can specify uncertainty.	[SU1] Assessment of task fulfilment					
Subject contents	State-space control: modeling, contr principle. Optimal control: LQR/LQG controller	olability, observability, controller and s, properties, loop transfer recovery	observer desigm separation					
	System norms, zeros and poles in MIMO systems, performance specification, generalized plant.							
	Robust control: robust stability and performance. Synthesis of robust controllers, loop shaping.							
Prerequisites and co-requisites	Principles of automatic control, Analog control, Algebra, Calulus, Complex calculus.							
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade					
	Exercises	61.0%	50.0%					
	Exam	61.0%	50.0%					
Recommended reading	Basic literature	W.L. Brogan, Modern Control Theory, Prentice Hall, 1990. S. Skogestad, I. Postlethwaite, Multivariable Feedback Control: Analysis and Design, Wiley, 2005.						
	Supplementary literature	N.S. Nise, Control Systems Engineering, Wiley						
	eResources addresses	Adresy na platformie eNauczanie:						

Example issues/ example questions/ tasks being completed	
Work placement	Not applicable
