

Subject card

Subject name and code	Real-Time Operating Systems, PG_00064518								
Field of study	Automatic Control, Cybernetics and Robotics								
Date of commencement of studies	February 2026		Academic year of realisation of subject			2025/2026			
Education level	second-cycle studies		Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit		Department Of Automatic Control -> Faculty Of Electronics Telecommunications And Informatics -> Nydziały Politechniki Gdańskiej							
Name and surname	Subject supervisor		dr inż. Marcin Pazio						
of lecturer (lecturers)	Teachers		dr inż. Marcin	Pazio					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	:t	Seminar	SUM	
	Number of study hours	15.0	0.0	15.0	0.0		0.0	30	
	E-learning hours inclu	ided: 0.0							
Learning activity and number of study hours	Learning activity	Participation in classes include plan				Self-study S		SUM	
	Number of study hours	30		4.0		16.0		50	
Subject objectives	The aim of the course is to acquaint students with architecture of a real-time operating systems and mechanisms available to users/programmers in a RTOS environment.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems		Student describes and knows how to assess the suitability of various mechanisms offered by operating systems to solve practical problems.			[SK5] Assessment of ability to solve problems that arise in practice			
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study		to put into practice the basic			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information			
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can: - apply analytical, simulation and experimental methods, - notice their systemic and non-technical aspects, - make a preliminary economic assessment of suggested solutions and engineering work		Student describes and knows how to apply the techniques in practice management computer system.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information

Prerequisites and co-requisites Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade	Subject contents	 Introduction to operating systems. The development of operating systems. Microsoft Windows and Unix-based operating systems. Processes. Definitions, description methods, method of process management. Threads. Implementation of single and multi-processor with examples. The kernel of the operating system. Concept of the microkernel. The tasks held by microkernel and threads management. Concurrency problems and methods of solving them. Rules for synchronization and mutual exclusion. Semaphores and message passing techniques. Imprisonment and deadlock. Methods of detection, avoidance and solving the problem ofthreads interaction. Examples of the actual system solutions. Memory management. Mechanisms of memory management, software solutions and hardware support mechanisms. Virtual Memory. Management methods. Examples of solutions. Process scheduling in single-CPU systems. Examples of solutions. Process scheduling in a multiprocessor system. Examples of solutions. File management methods. Examples. Resource management and input-output operations and storage. Examples Real time operating systems. Distributed computing. Technologies, client / server. Clusters. Computer networks. Security problems. 						
Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade Homework - simple computer program Midterm colloquium 50.0% 70.0% 70.0% 70.0%		No requirements						
Homework - simple computer program 80.0% 30.0% 30.0%		Subject passing evitoria	Dagging throubold	Dercentage of the final grade				
Recommended reading Basic literature Jedrzej Ulasiewicz "Systemy czasu rzeczywistego QNX6 NEUTRINO", Wydawnictwo btc, 2007 William Stallings "Systemy operacyjne, struktura i zasady budowy", Wydawnictwo Naukowe PWN, 2006 Supplementary literature J. W. S. Liu, "Real – time systems," Prentice Hall, 2000. R. Williams, "Real – time systems development.", BH/Eisevier 2006. eResources addresses Adresy na platformie eNauczanie: 1. What is the process and what is control block? Briefly discuss the states of process. What is the effect of the presence of virtual memory on a graph of the process? 2. What is the main differences between thread and process? What are the advantages of introducing multiple threads? What states can have thread in Linux? 3. Discuss the three main structures of operating systems. What do you do and what are the main differences? 4. Discuss the three main structures of operating systems. What do you do and what are the advantages of microkernel? 5. Discuss the problems of concurrency. Briefly describe what a mutex, semaphore and conditional variable. 6. What is a deadlock and starvation. Is there a general method of elimination of the impasse? What are ways to prevent starvation? 7. What is the relocation of memory, memory protection and main memory sharing? What is the "twin system"? 8. What is the resident set? What is the segmentation and paging of virtual memory? 9. Discuss the types of scheduling. What is the priority of the task? Are there ways to avoid starvation process? 10. What are the main differences between the scheduling in the single-and multi-processor systems? 11. Discuss methods of caching I / O devices.		Homework - simple computer	-					
Recommended reading Basic literature Jedrzej Ulasiewicz "Systemy czasu rzeczywistego QNX6 NEUTRINO", Wydawnictwo btc, 2007 William Stallings "Systemy operacyjne, struktura i zasady budowy", Wydawnictwo Naukowe PWN, 2006 Krzysztof Stencel "Systemy operacyjne", Wydawnictwo PJWSTK, 2004 Supplementary literature J. W. S. Liu, Real – time systems.", Prentice Hall, 2000. R. Williams, "Real – time systems development.", BH/Elsevier 2006. deResources addresses Adresy na platformie eNauczanie: 1.
