

Subject card

Subject name and code	Image Processing in Robotics, PG_00064529						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	February 2026	Academic year of realisation of subject				2025/2026	
Education level	second-cycle studies	Subject group				Optional subject group Specialty subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Oliński				
	Teachers		dr inż. Krzysztof Oliński				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
	eNauczanie source addresses: Moodle ID: 4833 Przetwarzanie obrazów w robotyce <a href="https://enauczanie.pg.edu.pl/2025/course/view.php?id=4833">https://enauczanie.pg.edu.pl/2025/course/view.php?id=4833</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	4.0	16.0	50		
Subject objectives	The participants should learn about the process of image acquisition from a video camera, all the problems connected with a proper image acquisition for image processing. Students should know the algorithms of image transformation, filtration, feature detection (image descriptors) and image processing algorithms used in industrial robotic systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems	The student is able to modify appropriate algorithms in order to implement a vision system with given properties.			[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study	Student knows and understands the mathematical foundations of image processing algorithms used in robotics.			[SW1] Assessment of factual knowledge		
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student understands the principles of operation of image processing systems in robotics.			[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
Subject contents	Course content – lecture The content of the subject includes problems of video image perception and acquisition, recording and methods of image processing for robotic applications. Processing concerns stereovision images as well as single image. The prospects of applying processing algorithms are discussed for industrial and mobile robots.						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	50.0%	100.0%
Recommended reading	Basic literature	Davies E.R. (2012), <i>Computer and Machine Vision: Theory, Algorithms, Practicalities</i> , Elsevier 2005	
	Supplementary literature	Gonzalez R. C. Woods R. E., <i>Digital Image Processing (3rd Edition)</i> , Prentice Hall 2008	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Practical activities within the subject	Not applicable
