

Subject card

Subject name and code	Mathematical statistics, PG_00045298						
Field of study	Data Engineering						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Karol Flisikowski				
	Teachers		dr inż. Karol Flisikowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	15.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		8.0		17.0	100
Subject objectives	Main aim of the course is to teach students the basic concepts of probability and their application in mathematical modeling. After the course students will be able to perform the procedure of testing of statistical hypotheses (parametric and nonparametric) using R and R-studio environment.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W05] integrates data from multiple sources in order to analyze complex business problems		Students will be familiar with the basic mathematical techniques necessary to carry out calculations in probability calculus, mathematical statistics.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U07] uses information technologies to improve the acquisition, analysis and processing of data in business applications		The student is able to use IT tools to collect, analyze, and process statistical data, supporting decision-making processes in business applications		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
	[K6_U05] develops innovative solutions for data analysis and processing, using appropriate methods and tools		The student is able to select and apply advanced mathematical statistics methods and analytical tools to design innovative solutions for data analysis and processing.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	Probability space: the classic scheme, drawing with replacement and without replacement. Geometric Probability. Conditional probability, total probability, Bayes' formula. Independence of events. Discrete random variable: probability distribution function and cumulative distribution. A review of selected distributions of discrete random variables: the distribution of single-point, two-point, Binomial, Poisson. Continuous random variable: probability density function and cumulative distribution. A review of selected distributions of continuous random variables: uniform distribution, exponential, normal, chi-square, Student's t. The basic numerical characteristics of discrete and continuous random variables. Population and sample; Sampling schemes; the sample distributions. Basic statistics and their distributions; Estimators and their properties; Methods of obtaining estimators; Point estimation; Interval estimation; Testing of statistical hypotheses; The level of significance and power of the test; Parametric tests for one-dimensional population. Parametric tests for two-dimensional population. Tests for multidimensional population. Analysis of variance. Nonparametric tests; Normality tests; Test of independence (chi-square test); Tests of randomness. Sign tests. Tests for outliers; Tests used in the analysis of correlation and regression.		
Prerequisites and co-requisites	Mathematics, descriptive statistics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final exam (lecture)	60.0%	40.0%
	Final test (seminar)	60.0%	30.0%
	Mid-term and final test (laboratory)	60.0%	30.0%
Recommended reading	Basic literature	1. McClave J. T., Benson P. G., Sincich T. (2008), Statistics for Business and Economics, Pearson/Prentice Hall. 2. Douglas Lind, William Marchal and Samuel Wathen, Statistical Techniques in Business and Economics, 19th Edition, McGraw Hill. 3. Agresti A., Kateri M. (2022), Foundations of Statistics for Data Scientists: With R and Python, Chapman and Hall/CRC.	
	Supplementary literature	1. Discovering statistics using R, Andy Field, Jeremy Miles, Zoe Field, Sage, 2012. 2. G. Jay Kerns, Introduction to Probability and Statistics using R, Third Edition, 2018.	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	1. Theoretical and empirical probability distribution and central limit theorem. 2. Point and interval estimation, precision of the estimator, the minimum sample size required to obtain a specific precision. 3. Parametric and nonparametric hypothesis testing. The final exam will test your knowledge of all the course material taught in the entire course.
