

## Subject card

Subject name and code	DATA ANALYSIS IN PYTHON, PG_00067545						
Field of study	Economic Analytics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department Of Statistics And Econometrics -> Faculty Of Management And Economics -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	Proposes innovative solutions to complex and unstructured problems using modern analytical methods, supporting its activities the use of information technology						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U01] creates innovative solutions for complex and unstructured processes, considering unpredictable environmental conditions through the synthesis of information from various sources.		formulates innovative solutions to economic and social problems, synthesizing information from many sources		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_W03] demonstrates in-depth knowledge of the applications of analytical methods and techniques for formulating and solving socio-economic problems.		uses the possibilities of support by modern information technologies in in-depth analysis of economic and social data		[SW1] Assessment of factual knowledge		
Subject contents	Introduction to R and Python languages. Basic operations. Data sources. Importing data from different formats in R vs Python Variables and data types in R vs Python (vector, data frame, array, list, arrays, sets, dictionaries) Basic functions - descriptive and mathematical statistics in R vs Python Basic data processing (new variables, filters, combining frames: transform, split, concatenate) in R vs Python Dirty data - missing observations; duplicates; outliers; formatting errors. Naniar package. Python libraries Data processing using Dplyr and Tidy. data transformation in Python Data cleaning - outliers and missing values. Imputations. Transformations and discretization of variables in Python. Optimal binning Graphics in R - basic and advanced graphical presentation of data (packages: ggplot2; Lattice; Grid) vs Graphics in Python (Matplotlib; Plotly, etc.) Analysis reporting with R/Python - introduction to R-Markdown and Quarto (notepad; presentations - R and Powerpoint; HTML slides; PDF beamer, etc.). Shiny Apps for Python Machine learning - linear models, generalized linear models. Iterative model fitting. Reporting Application of k-nearest neighbor (KNN) method Classification and clustering. Linear discriminant analysis; graphical trees; logistic regression Bagging and random forests Boosting method. XGBoost						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test	60.0%	50.0%
	Project - reports	60.0%	50.0%
