

## Subject card

Subject name and code	Next Generation Radio Communication Systems, PG_00048372						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2026/2027		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department Of Radiocommunication Systems And Networks -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Sławomir Gajewski				
	Teachers		dr inż. Sławomir Gajewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	The aim of the course is to familiarize students with problem issues and functioning rules relating to radio communication cellular systems of new generation.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems		The student can critically evaluate system solutions.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		The student can analyse technical problems in radio communication systems. Understands the structure and operating principles of new generation cellular systems.		[SW1] Assessment of factual knowledge		
	[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study		The student understands the principles of operation of individual components of radio communication systems. The student knows the principles of their design.		[SW1] Assessment of factual knowledge		

Subject contents	<p>1) Development of cellular networks and ITU and 3GPP standardisation.</p> <p>2) Basic requirements and frequency ranges for 4G, 5G and 6G cellular systems.</p> <p>3) General characteristics of LTE-Advanced Pro and 5G NR systems, basic technical parameters and properties of 4G and 5G systems, and IoT components.</p> <p>4) Multi-system and convergent cellular network - the process of network evolution and components' role from 2G to 6G.</p> <p>5) Heterogeneous network, cellular structures in new generation systems.</p> <p>6) 4G LTE and 5G NR network architectures, software architecture, and network functions.</p> <p>7) Software-defined networks SDN and virtualisation of network functions (VNF).</p> <p>8) Logical subnets implementation (Network Slicing) in the physical network.</p> <p>9) Architecture of radio access networks RAN (4G) and NG RAN (5G). Access networks: open RAN, virtualised RAN, AI-based RAN, cloud RAN, centralised RAN.</p> <p>10) General characteristics of the radio interface in 4G LTE and 5G NR systems, OFDM and SC-FDM transmission, modulation, channel coding, code-modulation schemes, and technical parameters.</p> <p>11) Problems of physical resources management in 4G and 5G networks.</p> <p>12) Frame formats, duplex modes, allocation of physical resources in 4G/5G systems, base services and teleservices.</p> <p>13) The principle of modulation and implementation of OFDM multi-tone transmission in 4G/5G system, demodulation principle and reception procedures.</p> <p>14) Signal processing in transport and physical channels in 4G/5G systems.</p> <p>15) Radio protocols in 4G/5G networks.</p> <p>16) PAPR problem in 4G/5G systems, OFDMA and SC FDMA multiple access techniques.</p> <p>17) Fundamentals of radio communication channel modelling for simulation/emulation purposes for research and metrology.</p> <p>18) System measurements in the 5G-NR/4G-LTE radio link and their relationship with the operation of the radio communication network, network parameters and signals measured in practice.</p> <p>19) Network diagnostics and optimisation in practice.</p> <p>20) CQI (channel quality indicator) in radio communication systems, modulation type and station range, MCS (code-modulation) schemes.</p> <p>21) Throughput, quality and range characteristics of LTE networks.</p> <p>22) Principles of designing 4G/5G radio interfaces based on OFDMA/SC-FDMA technique, configuration of system parameters, selection of link parameters.</p>
------------------	---

	<p>23) Efficiency of the OFDMA technique in new generation systems, link capacity, Shannon limit capacity.</p> <p>24) Inter-cellular interference coordination techniques, data scheduling, and principles of reusing the band in cells in radio communication systems.</p> <p>25) Modern techniques of reusing the frequency band in 4G/5G systems properties of selected techniques and their impact on the performance of the cellular network.</p> <p>26) Selected techniques for increasing capacity, throughput and radio coverage in new generation systems general characteristics.</p> <p>27) Resource management techniques and network performance. CoMP coordinated multipoint transmission techniques.</p> <p>28) Diversity of transmission and reception, MIMO and massive-MIMO techniques.</p> <p>29) 6G systems basic characteristics.</p> <p>30) Communication in 6G - immersive, AI-integrated, digital twins, integrated sensor-based sensing.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam, 2 godz. Oral exam is possible when the number of students is small.	50.0%	100.0%
