

Subject card

Subject name and code	Software Engineering, PG_00047848						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department Of Software Engineering -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Aleksander Jarzębowicz				
	Teachers		dr inż. Aleksander Jarzębowicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		60.0	125
Subject objectives	The course is focused on introducing to students the aspects of industrial software development: large systems, compliant to requirements of a specific customer, supporting business goals, providing a required level of quality characteristics, produced and maintained by large developers teams.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study		The student uses Unified Modeling Language and designs the models of IT systems. Develops the vision document of the IT system including basic requirements and restrictions.		[SU1] Assessment of task fulfilment		

Subject contents	<ol style="list-style-type: none">1. Introduction2. Scope and subject of software engineering. Essential motivations and concepts.3. Planning and defining scope of software project. Rich Picture.4. Areas of software engineering - an overview5. Conceptual modelling. Languages for modelling and specification.6. Use cases7. Object-oriented analysis using UML8. Modelling of logical system structure: class diagrams9. Modelling of system structure: other structural diagrams10. Modelling system dynamics: sequence and communication diagrams11. Modelling system dynamics: representing object"s state12. System design: system architecture13. System design: high-level design14. System design: class design (low level)15. Foundations of software quality. Metrics of object-oriented design.16. Software reuse17. Classical design patterns18. Other patterns (Internet Applications patterns, analysis patterns, architectural patterns, management patterns)19. Risk and social responsibility related to IT systems20. Requirements engineering: requirements determination21. Requirements engineering: requirements specification22. User interface design: motivations, terms, techniques23. User interface design: Nielsen"s heuristics and examples24. Software testing: terms, place in software development process25. Software testing: techniques (black/white box), levels of testing, managing tests26. Software reviews and inspections27. Software deployment28. Software usage and maintenance29. Configuration management and software evolution30. Classical (waterfall) software lifecycle model31. Non-classical software lifecycles and development processes32. Adjusting development process to particular software project context33. Outline of software project management34. Software development and management methodologies35. Properties of plan-driven and agile development36. CASE tools37. Other tools supporting software engineering		
Prerequisites and co-requisites	Presence during laboratory courses is mandatory. Delivery of all laboratory exercises and positive verification by tutor is required to pass the lab. Delays in delivering exercises affects the assessments. Only students who pass the lab are entitled to write the exam.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	50.0%
	Lab (assignments & tests)	50.0%	50.0%
Recommended reading	Basic literature	<ol style="list-style-type: none">1. Pressman R., Software Engineering: a Practitioner's Approach, 8th edition, McGraw-Hill, 20142.
