

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

| Subject name and code                          | Energy Use Rationalization, PG_00042075   |  |  |  |        |  |                   |     |  |
|--|---|--|--|--|--------|--|-------------------|-----|--|
| Field of study                                 | Power Engineering   |  |  |  |        |  |                   |     |  |
| Date of commencement of studies                | October 2025  |  | Academic year of realisation of subject  |  |        | 2027/  | 2027/2028         |     |  |
| Education level                                | first-cycle studies   |  | Subject group  |  |        | Obligatory subject group in the<br>field of study<br>Subject group related to scientific<br>research in the field of study |                   |     |  |
| Mode of study                                  | Full-time studies   |  | Mode of delivery   |  |        | at the   | at the university |     |  |
| Year of study                                  | 3   |  | Language of instruction  |  |        | Englis   | English           |     |  |
| Semester of study                              | 5   |  | ECTS credits   |  |        | 2.0  | 2.0               |     |  |
| Learning profile                               | general academic profile  |  | Assessment form  |  |        | assessment   |                   |     |  |
| Conducting unit                                | Department Of Electr<br>Politechniki Gdańskie   | pineering -> Faculty Of Electrical And Control Engineering -> Wydziały |  |  |        |  |                   |     |  |
| Name and surname of lecturer (lecturer)        | Subject supervisor  |  |  |  |        |  |                   |     |  |
|  | Teachers  |  |  |  |        |  |                   |     |  |
| Lesson types and methods of instruction        | Lesson type   | Lecture  | Tutorial   | Laboratory                             | Projec | t  | Seminar           | SUM |  |
|  | Number of study<br>hours  | 30.0   | 0.0  | 0.0                                    | 0.0    |  | 0.0               | 30  |  |
|  | E-learning hours inclu  |  |  | 1                                      |        |  |                   |     |  |
| Learning activity<br>and number of study hours | Learning activity   | Participation in didactic<br>classes included in study<br>plan         |  | Participation in<br>consultation hours |        | Self-study   |                   | SUM |  |
|  | Number of study hours   | ly 30  |  | 5.0                                    |        | 15.0   |                   | 50  |  |
| Subject objectives                             | Acquisition of technical and economic calculations skills for energy technologies and energy saving projects.   |  |  |  |        |  |                   |     |  |
| Learning outcomes                              | Course out  | come   | Subject outcome  |  |        | Method of verification   |                   |     |  |
|  | [K6_W10] knows the basic<br>installations in the field of<br>renewable energy sources and<br>their impact on the environment  |  | Development of technical-<br>economic analysis of selected<br>technology, using renewable<br>energy source, fossil fuels or<br>nuclear energy. |  |        | [SW3] Assessment of knowledge<br>contained in written work and<br>projects<br>[SW1] Assessment of factual<br>knowledge     |                   |     |  |
|  | [K6_W06] knows classic and<br>developmental energy<br>technologies, rules for the<br>selection and operation of heat<br>and energy devices and<br>installations, basic principles of<br>energy systems operation, basic<br>issues regarding the reliability of<br>energy devices and diagnostics,<br>environmental effects of energy<br>technologies used, methods of<br>using renewable energy sources   |  | technology, using renewable<br>energy source, fossil fuels or  |  |        | [SW3] Assessment of knowledge<br>contained in written work and<br>projects<br>[SW1] Assessment of factual<br>knowledge     |                   |     |  |
| Subject contents                               | Energy policy of the European Union and Poland. Legal documents and support programs for energy efficiency. Measures to improve energy efficiency. Energy audit. Certificate of energy performance of the building. Heat for the needs of buildings. Thermomodernization. Electric drives. Cogeneration. Indicators of energy efficiency assessment. Cost analysis and static and dynamic methods of assessing cost-effectiveness in energy. Technical and economic analysis of the selected technologies using renewable energy resources, fossil fuels or nuclear energy. |  |  |  |        |  |                   |     |  |
| Prerequisites<br>and co-requisites             |   |  |  |  |        |  |                   |     |  |
| Assessment methods<br>and criteria             | Subject passing criteria  |  | Passing threshold  |  |        | Percentage of the final grade  |                   |     |  |
|  |   |  |  |  |        | 100.0%   |                   |     |  |

| Recommended reading Basic literature  |  | European Standard Energy Audits (EN 16247-1)   |  |  |  |  |  |
