

Subject card

Subject name and code	Mathematics II, PG_00055377							
Field of study	Mechatronics							
Date of commencement of studies	October 2025	Academic year of realisation of subject		2025/2026				
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1	Language of instruction		Polish				
Semester of study	2	ECTS credits		9.0				
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Mathematics Center -> Vice-Rector For Education							
Name and surname of lecturer (lecturers)	Subject supervisor Teachers		dr Stanisław Domachowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM	
	Number of study hours	30.0	45.0	0.0	15.0	0.0	90	
E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM	
	Number of study hours	90		24.0		111.0	225	
Subject objectives	The aim of the subject is to obtain the student's competence in the use of the basic apparatus of mathematical analysis and linear algebra and the application of the acquired knowledge to solve simple theoretical and practical problems occurring in engineering fields.							

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W01] has knowledge in the field of mathematics that include vector and matrix calculus, analytical geometry, mathematical analysis (including ordinary and partial differential equations) and elements of discrete and applied mathematics, including mathematical and numerical methods essential to: 1) description and analysis of stationary, continuous and discrete mechatronics systems as well as basic physical phenomena that occur there; 2) description and analysis of programmable mechatronic systems; 3) description and analysis for signal processing; 4) synthesis of mechatronics elements and systems	Student examines functions of several variables, using the concept of a limit, continuity and derivatives. Students calculates double integrals, and explains the method of substitution in the double integral. Student applies double integrals in solving geometrical problems. Student calculates triple integrals, and explains the method of substitution in the triple integral. Student applies triple integrals in geometrical problems. Student calculates the radius of convergence and the interval of convergence of a power series. Student demonstrates some chosen techniques of solving ordinary differential equations. Student determines general and particular solutions of some types of the first and second order differential equations. Student determines general and particular solutions of higher orders linear differential equations with constant coefficients. Student determines general and particular solutions of systems of differential equations.	[SW1] Assessment of factual knowledge
	[K6_U01] is able to acquire information from literature, databases and other, properly chosen sources, integrate these information, interpret them, draw conclusions and formulate opinions	Student combines knowledge of mathematics with knowledge from other fields.	[SU2] Assessment of ability to analyse information
	[K6_U03] has self-learning skills	Student recognizes the importance of self-expanding knowledge	[SU4] Assessment of ability to use methods and tools
Subject contents	Vectors in three-dimensional space. The dot, and the cross product of vectors, their properties and applications. The scalar triple product of vectors, and its applications. Equations of a line and a plane in a space. Distance from a point to a plane. Angles between planes and lines. Limits and continuity of a function of several variables, partial derivatives, total differentiability, extrema of functions of several variables, implicit functions. Double integral over a rectangle, and the normal domain, change of variables in a double integral. Applications of the double integral. Triple integral over a cuboid, and the normal domain. Change of variables in a triple integral. Applications of the triple integral. Infinite series. Convergence tests for infinite series. Power series. Taylor and Maclaurin series. First order differential equations. General and particular solution of the differential equation. Initial value problem. Separable, linear, Bernoulli and exact differential equations. Integrating factor. Second order differential equations. Linear differential equations of order n with constant coefficients. Fundamental set of solutions of the homogeneous linear differential equation with constant coefficients. Non-homogeneous linear differential equations. Systems of differential equations.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	90 minutes written exam, 3 tests, active participation during classes	50.0%	100.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed		<p>1. Find the local extreme values of the function $f(x,y)=x/(y+1)+8/x-y-1$.</p> <p>2. Compute the double integral of the given function $f(x,y)$ over the region D</p> <p>3. Find the area of the region bounded by the curves</p> <p>4. Using cylindrical or spherical coordinates evaluate the given triple integral.</p> <p>5. Check convergence of the series using the ratio test, the root test, the comparison test or the integral test.</p> <p>6. Find a radius of convergence of power series.</p> <p>7. Prove a uniformly and absolutely convergent of a series.</p> <p>8. Find a an interval of convergence of a power series.</p> <p>9. Find a general solution of differential equations.</p> <p>10. Find a particular solution satisfying the given initial conditions of the differential equations.</p>
