

Subject card

Subject name and code	Fundamentals of Digital Signal Processing, PG_00060474						
Field of study	Mechatronics						
Date of commencement of studies	October 2025	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Division Of Mechatronics -> Institute Of Mechanics And Machine Design -> Faculty Of Mechanical Engineering And Ship Technology -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marek Galewski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		1.0		19.0	50
Subject objectives	Presenting basics of digital signal and image processing						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W07] has organised knowledge in the field of metrology; knows and understands methods for measurement and processing of basic quantities that characterize mechatronic systems; knows basic methods of analogue and digital signals processing and computational methods and IT tools essential for analyses of experimental results	Student correctly selects parameters of ADC channel	[SW1] Assessment of factual knowledge
	[K6_W06] has organised knowledge in the field of informatic that includes architecture of computer systems, programming of computers and embedded systems and elements of software engineering	Student develops simple programs performing basic digital signal processing	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W01] has knowledge in the field of mathematics that include vector and matrix calculus, analytical geometry, mathematical analysis (including ordinary and partial differential equations) and elements of discrete and applied mathematics, including mathematical and numerical methods essential to: 1) description and analysis of stationary, continuous and discrete mechatronics systems as well as basic physical phenomena that occur there; 2) description and analysis of programmable mechatronic systems; 3) description and analysis for signal processing; 4) synthesis of mechatronics elements and systems	Student understands basic, analytical dependencies lying behind signal processing, especially Fourier transform and sampling theory	[SW1] Assessment of factual knowledge
	[K6_U04] is able to utilise known methods and mathematical models as well as analogue and digital measurement methods for analysing and assessment of stationary continuous and discrete mechatronics systems and processes	Student performs basic signal processing (using appropriate tools). Student avoids frequency leakage and aliasing. Student interprets signal spectrum plot.	[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
Subject contents	Signal processing: A/C and D/A conversions, basic signal parameters, Fourier transformation and signal spectrum, FFT, IFFT, frequency leak, time windows, theory of sampling, aliasing Image processing: Creation and representation of digital image, geometrical transformations, point transformations - contextual and noncontextual, spectral transformations, morphological transformations, basic image recognition techniques, Artificial neural Networks in image processing		
Prerequisites and co-requisites	Knowledge from Mathematics and Metrology and measurement systems courses		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercises / projects	52.0%	30.0%
	Colloquiums	52.0%	70.0%
Recommended reading	Basic literature	1. Lecture materials published at the web site of the chair of Mechanics and Mechatronics 2. Laboratory exercises handbook	
	Supplementary literature	1. Proakis J.G, Manolakis D.G. Digital Signal Processing, 2021 2. Jayden H. Beginners guid to computer vision: Leverage Deep Learning To Create Powerful Image Processing Apps, 2021 3. Tłaczala W.: Środowisko LabVIEW w eksperymencie wspomaganym komputerowo. WNT, Warszawa 2005	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Students receive a list of potential questions a few weeks before the colloquium		
Work placement	Not applicable
