

Subject card

Subject name and code	Fluid Mechanics, PG_00060534						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		7.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department Of Theory And Ship Design -> Faculty Of Mechanical Engineering And Ship Technology -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Paweł Dymarski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		6.0		109.0	175
Subject objectives	To familiarize students with the basic concepts and laws of fluid mechanics, such as: - density, viscosity, compressibility, surface tension, - Static equilibrium equations of fluid, hydrostatic pressure, fluid forces on straight surfaces, etc. - Continuity equation, - The principle of momentum conservation, - Calculation of hydrodynamic forces, - The principle of conservation of energy for non-viscous fluid, incompressible flow (Bernoulli eq.) - Basic issues of viscous liquid flow, determination of losses in the flow. - The concept of the stress tensor in a real (viscous) fluid.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W02] has knowledge in the field of technical mechanics, fluid mechanics, strength of materials, necessary to understand the basic physical phenomena occurring in ocean engineering		Knows basic concepts and methods in the field of fluid mechanics, can solve basic FM tasks		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_K02] can work in a team, assuming various roles, can act in a rational and ethical way		Working in a team, he is able to solve more complex fluid mechanics tasks and develop results from laboratory exercises		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W03] has knowledge of hydromechanics, thermodynamics, machine design, ecology, materials science necessary to understand the principles of construction and operation of ocean engineering facilities and equipment		Has knowledge of hydromechanics necessary to understand the principles of design and operation of ships and offshore structures and devices		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	The course consists of lectures and exercises Scope of the course: The main properties of fluids: - The density, viscosity, compressibility, surface tension, Basic concepts: - Particle fluid - The pressure, shear stress, - Pascal's law. Fluid statics: - The hydrostatic equilibrium equations of fluid - The hydrostatic pressure formula, - Pressure force to the flat surface - - The concept of the center of pressure force, - - Calculation of the moment of pressure force. - - Buoyancy, center of buoyancy. - Stability of floating bodies (ships) - - Metacentric radius, - - Metacentric height, - - Equilibrium conditions. The main issues of fluid kinematics: - A description of the motion of fluids: - - Eulerian method, - - Lagrangian method - Determination of position, velocity and acceleration of the fluid, - The concept of the path of the fluid particles (pathline), streamline, streamsurface, streamtube The principle of conservation of mass (continuity equation): - The concept of the mass flow rate the volumetric flow rate, - The concept of control surface, control volume - Calculation of the flow velocity at varying cross channel The principle of conservation of energy for perfect fluid, incompressible flow (Bernoulli's equation): - Solving one-dimensional flow problems in channels: determination of the flow rate and pressure. The principle of conservation of momentum, - The concept of a volume of liquid, - Guiding principles of conservation of momentum in the form of integral, - Calculation of hydrodynamic forces, The concept of the stress tensor in a real(viscous) fluid. Basic issues of the real fluid flow, determination of loss in the flow: - Generalized Bernoulli equation, - Determining the amount of local loss and linear : - - Types of flow of real fluids: - - - Laminar flow - - - Transitional flow, - - - Turbulent flow.														
Prerequisites and co-requisites	Knowledge of the basic concepts of physics / mechanics: - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinetic energy, - Knowledge of units related to above concepts, Knowledge of the basic concepts of calculus / calculus - Definite integral, - Derivative of the function, - Basic ability to apply integrals in problems of physics - Ordinary differential equations with separated variables - The surface integral, volume integral Knowledge of algebra: - The transformation of algebraic expressions, - The ability to "take before the parenthesis" (!!!) Algebra of vectors: - The scalar product, - Vector product, - Vector component, - The projection of the vector on the direction of the specified unit vector Knowledge of trigonometric functions - Sine, cosine, tangent, cotangent Basic knowledge of stereometry (3D geometry) - Eg :: calculating the volume of a cylinder, cuboid, and the like. - Eg :: calculating the area of the cylinder Knowledge of floating point notation, eg :: * 10 ^ 6 - Ability to use scientific calculator														
Assessment methods and criteria	<table><tr><td>Subject passing criteria</td><td>Passing threshold</td><td>Percentage of the final grade</td></tr><tr><td>Lecture - Colloquium</td><td>60.0%</td><td>50.0%</td></tr><tr><td>Exercises - Colloquia</td><td>60.0%</td><td>25.0%</td></tr><tr><td>Lab exercises - report</td><td>70.0%</td><td>25.0%</td></tr></table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Lecture - Colloquium	60.0%	50.0%	Exercises - Colloquia	60.0%	25.0%	Lab exercises - report	70.0%	25.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
Lecture - Colloquium	60.0%	50.0%													
Exercises - Colloquia	60.0%	25.0%													
Lab exercises - report	70.0%	25.0%

Example issues/ example questions/ tasks being completed	LECTURE: - Define the basic terms of determining the properties of the fluid: a) density, b) specific gravity, c) viscosity. - Enter the formula for the shear stress for Newtonian fluid. Name the individual members of the equation, draw a sketch illustrating the issue for a simple case. - Provide the definition of pressure. Write a basic formula for the pressure, describe occurring in the formula values. - Describe the concept rate of volume/mass flow. Provide definitions (formulas): a) the mass flow rate b) the volumetric flow rate - Provide and explain the continuity equation in the integral form - Derive, on the basis of the second law of Newton's, law of conservation of momentum for the volume of the fluid. Describe members included in the equation. - Provide the general form of the stress tensor of the fluid. Describe the elements of the tensor. Show how to obtain the stress on the surface of the direction specified wersorem n. What form takes the stress tensor for an perfect (inviscid) fluid . - Formulate energy conservation equation for the perfect (inviscid) fluid and incompressible steady flow along a streamline. Name the individual members of the equation. - Liquid is flowing pipeline. In the section "1" a cross-section area is A_1, the height above the base z_1, the liquid velocity is V_1, and the pressure is p_1. Provide speed v_2, and the pressure p_2 in the section "2" pipe, if we know its cross-section area A_2 and the height above the baseline z_2. The head loss between "1" and "2" is h_s. - Derive the formula for the hydromechanical reaction acting on the flowed body. - What characterizes (in terms of the most important feature): a) perfect fluids, b) real fluids. - Give the equation that defines: a) The streamline, b) The path of the fluid paricle (pathline, trajectory). In which case the streamline and the pathline will be the same lines. - Calculate the volume and mass flow rate of air through the area A which is an inlet to the building air conditioning system for the following data: - normal unit vector to the A surface: $n = [1.414; 0; 1.414]$, the surface area $A = 1\text{ m}^2$; - average velocity vector on the surface A: $v = [1; 0; 0] \text{ [m / s]}$ - air density $\rho_0 = 1.2 \text{ kg / m}^3$ EXERCISES: You should master the tasks solved in the classroom
