

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Fluid Mechanics, PG_00060584							
Field of study	Design and Construction of Yachts							
Date of commencement of studies	October 2025		Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	2		Language of instruction		Polish			
Semester of study	3		ECTS credits		7.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department Of Theory And Ship Design -> Faculty Of Mechanical Engineering And Ship Technology -> Wydziały Politechniki Gdańskiej							
Name and surname	Subject supervisor		dr hab. inż. Paweł Dymarski					
of lecturer (lecturers)	Teachers				1			
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	15.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	y Participation in did classes included ir plan		Participation in consultation hours		Self-study SUM		SUM
	Number of study hours	60		6.0		109.0		175
Subject objectives	To familiarize students with the basic concepts and laws of fluid mechanics, such as: - density, viscosity, compressibility, surface tension, - Static equilibrium equations of fluid, hydrostatic pressure, fluid forces on straight surfaces, etc. - Continuity equation, - The principle of momentum conservation, - Calculation of hydrodynamic forces, - The principle of conservation of energy for non-viscous fluid, incompressible flow (Bernoulli eq.) - Basic issues of viscous liquid flow, determination of losses in the flow. - The concept of the stress tensor in a real (viscous) fluid.							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
	[K6_W02] has knowledge in the field of technical mechanics, fluid mechanics, strength of materials, necessary to understand the basic physical phenomena occurring in ocean engineering		Knows basic concepts and methods in the field of fluid mechanics, can solve basic FM tasks		[SW3] Assessment of knowledge contained in written work and projects			
	assuming various roles, can act in		Working in a team, he is able to solve more complex fluid mechanics tasks and develop results from laboratory exercises		[SK5] Assessment of ability to solve problems that arise in practice			
	[K6_W03] has knowledge of hydromechanics, thermodynamics, machine design, ecology, materials science necessary to understand the principles of construction and operation of ocean engineering facilities and equipment		Has knowledge of hydromechanics necessary to understand the principles of construction and operation of yachts			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	The course consists of lectures and exercises						
Subject contents	The course consists of lectures and exercises						
	Scope of the course:						
	The main properties of fluids: - The density, viscosity, compressibility, surface tension, Basic concepts: - Particle fluid - The pressure, shear stress, - Pascal's law. Fluid statics: - The hydrostatic equilibrium equations of fluid - The hydrostatic pressure formula,						
	Pressure force to the flat surface						
	 - The concept of the center of pressure force, - Calculation of the moment of pressure force. 						
	Buoyancy, center of buoyancy.						
	- Stability of floating bodies (ships)						
	Metacentric radius, Metacentric height,						
	Equilibrium conditions.						
	The main issues of fluid kinematics: - A description of the motion of fluids:						
	Eulerian method,						
	Lagrangian method						
	 Determination of position, velocity and acceleration of the fluid, The concept of the path of the fluid particles (pathline), streamline, streamsurface, streamtube 						
	The principle of conservation of mass (continuity equation):						
	- The concept of the mass flow rate the volumetric flow rate,						
	 The concept of control surface, control volume Calculation of the flow velocity at varying cross channel 						
	The principle of conservation of energy for perfect fluid, incompressible flow (Bernoulli's equation):						
	 Solving one-dimensional flow problems in channels: determination of the flow rate and pressure. The principle of conservation of momentum, 						
	- The concept of a volume of liquid,						
	 Guiding principles of conservation Calculation of hydrodynamic forces 	of momentum in the form of integral,					
	 Calculation of hydrodynamic forces, The concept of the stress tensor in a real(viscous) fluid. Basic issues of the real fluid flow, determination of loss in the flow: Generalized Bernoulli equation, Determining the amount of local loss and linear : 						
	Types of flow of real fluids:						
	Laminar flow						
	Transitional flow, Turbulent flow.						
	Turbulent flow.						
Prerequisites	Turbulent flow. Knowledge of the basic concepts of	physics / mechanics:					
Prerequisites and co-requisites	Turbulent flow.	physics / mechanics:					
	 Turbulent flow. Knowledge of the basic concepts of Force (force vector) Torque, The arm of force, 	physics / mechanics:					
	Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque,						
	 Turbulent flow. Knowledge of the basic concepts of Force (force vector) Torque, The arm of force, What is the pressure (?) 	ic energy,					
	 Turbulent flow. Knowledge of the basic concepts of Force (force vector) Torque, The arm of force, What is the pressure (?) Momentum, potential energy, kinet Knowledge of units related to above 	ic energy, e concepts,					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, 	ic energy, e concepts,					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, 	ic energy, e concepts, calculus / calculus					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, 	ic energy, e concepts, calculus / calculus oblems of physics					
	 Turbulent flow. Knowledge of the basic concepts of Force (force vector) Torque, The arm of force, What is the pressure (?) Momentum, potential energy, kinet Knowledge of units related to abov Knowledge of the basic concepts of Definite integral, Derivative of the function, Basic ability to apply integrals in pr 	ic energy, e concepts, calculus / calculus oblems of physics separated variables					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with 	ic energy, e concepts, calculus / calculus oblems of physics separated variables					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex - The ability to "take before the pare Algebra of vectors: 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex - The ability to "take before the pare Algebra of vectors: - The scalar product, 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex - The ability to "take before the pare Algebra of vectors: 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integri Knowledge of algebra: - The transformation of algebraic exit - The scalar product, - Vector product, - Vector component, 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integri Knowledge of algebra: - The transformation of algebraic exit - The scalar product, - Vector product, - Vector component, 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral pressions, nthesis" (!!!)					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex; - The scalar product, - Vector product, - The projection of the vector on the 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral pressions, nthesis" (!!!)					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex - The ability to "take before the pare Algebra of vectors: - The scalar product, - Vector product, - Vector component, - The projection of the vector on the Knowledge of trigonometric function - Sine, cosine, tangent, cotangent 	ic energy, e concepts, calculus / calculus oblems of physics separated variables ral pressions, nthesis" (!!!) direction of the specified unit vector s					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integri Knowledge of algebra: - The transformation of algebraic ex; - The scalar product, - Vector product, Vector component, - The projection of the vector on the Knowledge of trigonometric function - Sine, cosine, tangent, cotangent 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral pressions, nthesis" (!!!) direction of the specified unit vector s					
	 Turbulent flow. Knowledge of the basic concepts of - Force (force vector) - Torque, - The arm of force, - What is the pressure (?) - Momentum, potential energy, kinet - Knowledge of units related to abov Knowledge of the basic concepts of - Definite integral, - Derivative of the function, - Basic ability to apply integrals in pr - Ordinary differential equations with - The surface integral, volume integr Knowledge of algebra: - The transformation of algebraic ex; - The scalar product, - Vector product, - Vector component, - The projection of the vector on the Knowledge of trigonometric function Sine, cosine, tangent, cotangent 	ic energy, e concepts, calculus / calculus oblems of physics e separated variables ral pressions, nthesis" (!!!) direction of the specified unit vector s

Example issues/ example questions/ tasks being completed	LECTURE:				
	 Define the basic terms of determining the properties of the fluid: a) density, b) specific gravity, c) viscosity. 				
	2. Enter the formula for the shear stress for Newtonian fluid. Name the individual members of the equation, draw a sketch illustrating the issue for a simple case.				
	3. Provide the definition of pressure. Write a basic formula for the pressure, describe occurring in the formula values.				
	4. Describe the concept rate of volume/mass flow. Provide definitions (formulas):a) the mass flow rateb) the volumetric flow rate				
	5. Provide and explain the continuity equation in the integral form				
	6. Derive, on the basis of the second law of Newton's, law of conservation of momentum for the volume of the fluid. Describe members included in the equation.				
	7. Provide the general form of the stress tensor of the fluid. Describe the elements of the tensor. Show how to obtain the stress on the surface of the direction specified wersorem n. What form takes the stress tensor for an perfect (inviscid) fluid .				
	8. Formulate energy conservation equation for the perfect (inviscid) fluid and incompressible steady flow along a streamline. Name the individual members of the equation.				
	9. Liquid is flowing pipeline. In the section "1" a cross-section area is A1, the height above the base z1, the liquid velocity is V1, and the pressure is p1. Provide speed v2, and the pressure p2 in the section "2" pipe, if we know its cross-section area A2 and the height above the baseline z2. The head loss between "1" and "2" is hs.				
	10. Derive the formula for the hydromechanical reaction acting on the flowed body.				
	11. What characterizes (in terms of the most important feature):a) perfect fluids,b) real fluids.				
	12. Give the equation that defines:a) The streamline,b) The path of the fluid paricle (pathline, trajectory).In which case the streamline and the pathline will be the same lines.				
	conditioning system for the follow	ce: n = [1.414; 0; 1.414], the surface area A = 1m2;			
	EXERCISES: You should master the tasks solve	ed in the classroom
