

Subject card

Subject name and code	Technology of Marine Control Systems, PG_00061843						
Field of study	Design and Construction of Yachts						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division Of Automation And Marine Energy -> Institute Of Naval Architecture -> Faculty Of Mechanical Engineering And Ship Technology -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Mohammad Ghaemi				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		0.0		0.0	60
Subject objectives	The aim of the course is to familiarize students with the basic and most important technologies applied in the regulation, control and monitoring of ship systems, mainly applied for yachts.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K03] is aware of the impact of non-technical aspects on the engineer's work and the impact of engineering activities on the natural environment						
	[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task		The student can communicate with professionals using various techniques (including simulation) used in the analysis and synthesis of the structure, elements and modules implemented in marine control systems (particularly in yachts) as well as document, analyze and present the results of his/her work related to the tasks performed in the field of the initial design of control systems of selected systems ships.		[SU1] Assessment of task fulfilment		
	[K6_W04] has knowledge in the field of computer science, electronics, electrical engineering, automation and control, information technology, computer graphics, useful for understanding the possibilities of their use in ocean engineering		The student has knowledge in the field of technology of automation and control systems of major marine systems, particularly applied in yachts, useful for analyzing their application in marine technology.		[SW1] Assessment of factual knowledge		

Subject contents	1. Introduction to yacht automation - ecological, social, economic and technical aspects 2. Overview of the process of designing the control system by taking into account the technological aspects - example 3. Measuring elements, sensors, transducers and transformers - types and classification, characteristics of measuring elements (including: sensors and transducers/transformers of position, angular velocity, load and force, pressure, temperature, flow, liquid level and sensors used in underwater technology). 4. Servomechanisms and actuators used in control systems - types and characteristics, including: servomechanisms and hydraulic and pneumatic actuators, as well as control valves. 5. Modeling, simulation and control of the yacht's propulsion system, including angular speed control, remote control of the propulsion system, control of multi-propeller and/or multi-engine propulsion systems 6. Logic and sequence control, including relays and switching, Boolean algebra, gate logic, ladder diagrams, logic components, programmable logic controllers and their programming. 7. Automatic control of the selected yacht's systems 8. SCADA, OPC, HMI, IoT, and communication standards and protocols 9. Safety and monitoring systems, alarms and signaling		
Prerequisites and co-requisites	Theory of Marine Control Systems		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tutorials	51.0%	25.0%
	Lecture	56.0%	45.0%
	Project	51.0%	30.0%
