

## Subject card

Subject name and code	Linear Algebra, PG_00068319						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Mathematics Center -> Vice-Rector For Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Robert Fidytek				
	Teachers		dr Robert Fidytek  mgr Anetta Brękwicz-Sieg				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		3.0		37.0	100
Subject objectives	Students obtain competence in the range of using methods of linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n- selection and application of appropriate methods and toolsn		Student uses basic notions and formulas of matrix and vector calculus. Student analyses a given problem from analitic geometry. Student uses complex numbers.		[SU4] Assessment of ability to use methods and tools		
	[K6_W01] knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study		Student defines the basic concepts of linear algebra and analitic geometry necessary to solve simple engineering problems in the domain of education.		[SW1] Assessment of factual knowledge		

Subject contents	Complex numbers group and field, the field of complex numbers, algebraic, trigonometric, and exponential forms of complex numbers, operations on complex numbers, algebraic roots, roots of polynomials. Vector spaces definition and examples of vector spaces, linear dependence, basis and dimension of a vector space, isomorphism of vector spaces. Matrices and determinants basic operations, properties of determinants, the ring of matrices, inverse matrix, rank of a matrix. Systems of linear equations Gaussian elimination method, matrix and determinant methods, KroneckerCapelli theorem. Euclidean spaces inner product, orthogonal bases, orthogonal matrix, isomorphism of Euclidean spaces. Analytic geometry in space vectors and basic vector operations, scalar, vector, and mixed products, plane and line, their mutual position in space, pencil of planes. Eigenvalues and eigenvectors of a matrix.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final test	50.0%	100.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	1. Prove that in a field K the equation $ax = b$ has exactly one solution for a different from 0.  2. Find the cube root of the number $(2-2i)^2$ . Present the results in exponential form and mark them on the complex plane.  3. For which values of the parameter m does the system of equations $(2-m)x + y + 2z = 0$ $2x + (1-m)y + 2z = 0$ $2x + y + (2-m)z = 0$ have nonzero solutions? Find these solutions for the smallest among the determined values of m.  4. Find the orthogonal projection of the line $l: \frac{x}{2} = \frac{y-1}{1} = \frac{z+1}{2}$ onto the plane $\pi: x + y + 2z + 4 = 0$ . Express the sought line in parametric form.  5. Determine the matrix X from the equation: $(3BA)^{-1} \cdot B \cdot X = B$ , where $A = \begin{bmatrix} 1 & 2 \\ 0 & 1 \end{bmatrix}$ $B^{-1} = \begin{bmatrix} 2 & 0 \\ 0 & 2 \end{bmatrix}$ .
