

Subject card

Subject name and code	Control in industrial objects, PG_00058309						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2028/2029		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department Of Control Engineering -> Faculty Of Electrical And Control Engineering -> Wydziały Politechniki Gdańskie]						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marcin Śliwiński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		53.0	100
Subject objectives	The aim of the course is to present selected industrial facilities and the interrelation of the control systems with the industrial technology used in them. With a focus on automation systems process automation systems, sequential automation systems; control and protection automation systems in nuclear power plant and refinery.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W11] knows the hazards arising from devices, installations, systems and technical systems, basic principles of occupational health and safety, taking into account the role of control and security systems in controlling automation and robotics facilities		The student is able to assess threats from the outside on functioning distributed control and safety systems.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K6_U09] is able to use artificial intelligence methods and understands the advantages and limitations of using this type of tools in engineering		The student has advanced knowledge about the use of methods artificial intelligence.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K6_K04] can react in abnormal and emergency situations, threats to health and life when using automation and robotics components and systems		The student has basic knowledge of the application of the methodology of functional safety.		[SK4] Assessment of communication skills, including language correctness [SK2] Assessment of progress of work		
	[K6_U07] can build and analyze models of systems and systems in the field related to control systems and automation		Students can perform a simple one model of a fragment of the installation process in software simulation.		[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>Lecture. The scope includes a discussion of the structure of a modern enterprise using selected examples industrial facilities: object measurement systems and actuators; control systems processes (BPCS; DCS) and their supervision from the central control room (alarm system; SCADA); systems protection automation (SIS; SRS; ESD) and production management systems with elements business management (SAP; ERP; MES). Cooperation of individual systems within structure of a layered control system, from the direct control (and protection) layer through superior control systems to the management and production planning layer. Classification facilities and automation systems in facilities in relation to the technologies used. Characteristics functional, technical and organizational systems of facilities. Ship automation system, control sequential, energy system and power system, wind farms, installations petrochemical and nuclear power plants. Illustration of interactions between the controlled object and control unit. Discussion of the quantities characterizing the controlled object, taking into account aspects technological processes occurring in the facilities under consideration.</p> <p>Design. Computer control, monitoring (SCADA) and security automation systems used in typical industrial facilities. Examples of sequential control systems. Executive and measurement subsystems in BPCS, DCS, SIS and ESD systems used in facilities industrial. Introduction to modeling of typical technological processes industrial facilities using Flownex SE software.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Evaluation for the project	60.0%	30.0%
	Pass-fail test part 2	60.0%	35.0%
	Pass-fail test part 1	60.0%	35.0%
