GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mechanics, PG_00038429						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
					Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		blended-learning		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Faculty Of Electrical And Control Engineering -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Łukasz Doliński				
	Teachers						

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 30.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	45	4.0	26.0	75

Subject objectives	Obtaining of basic knowledge form mechanic and strength of materials

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_W02	The student can identify the equilibrium conditions of basic force systems and define the types of stresses.	[SW1] Assessment of factual knowledge
	K6_K01	The student is able to develop his knowledge independently.	[SK5] Assessment of ability to solve problems that arise in practice
	K6_U02	The student can independently solve simple statics and strength of materials tasks.	[SU4] Assessment of ability to use methods and tools

Subject contents	Basic concepts. The axioms of statics. Original concepts: force as a vector, zero two, the theorem on moving the vector along the acting line, resultant of two non-parallel forces in the plane, decomposition of force to the two components of given directions. The principle of action and reaction, types of bonds, equilibrium of convergent set of forces, different sets of forces. Analytical representation of force. Main vector. Conditions of equilibrium of convergent flat and spatial set of forces. Three forces theorem. A pair of forces. Moment of pair of forces. Concatenation of two parallel forces. Pair of forces theorem. Concatenation of pair of forces in one plane. Moment of force with respect to the point and axis. Moment of a force with respect to the point (pole) and axis. Parallel moving forces theorem. Equilibrium of free, planar and spatial set of forces. Reduction of planar and spatial set of forces typical cases. Condition of equilibrium of planar and spatial set of forces. Centre of gravity. Centre of parallel forces. Centre of gravity of solids, plane figures and lines. Friction, static friction, the force of static friction, kinetic friction, string friction, rolling friction. Basic assumptions and hypotheses of the strength of materials, types of loads, deformations and stresses. Elements of elasticity theory. Loads classification. The de Saint-Venant principle. Fundamentals of designing structures. Moments of inertia of planar figures. Tension and compression of straight bars. Technological Shear. Torsion of rods. Bending. Strength. Bending with tension or compression. Bending and torsion. Fatigue strength. Basic concepts of fatigue strength, fatigue strength the cycles of symmetrical and asymmetrical. Factors influencing the change of fatigue strength.

Prerequisites and co-requisites	Knowledge of algebra on secondary school level

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Class tests	50.0%	50.0%
	Midterm colloquium	50.0%	50.0%
