

Subject card

Subject name and code	Computer-Aided Manufacturing CAD/CAM/CNC, PG_00063627						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2025	Academic year of realisation of subject				2025/2026	
Education level	second-cycle studies	Subject group				Specialty subject group Subject group related to scientific research in the field of study	
Mode of study	Part-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	2	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department Of Power Electronics And Electrical Machines -> Faculty Of Electrical And Control Engineering - > Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Roland Ryndzionek				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	0.0	10.0	0.0	0.0	20
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		6.0		24.0	50
Subject objectives	The aim of the course is to familiarise students with CAD, CAS, CAE, CAM, CNC tools.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W06] has an extended knowledge of the design of automation components and devices, control and decision support systems control and decision support systems and complex mechatronic systems		chooses appropriate methods to solve a problem, exchanges information with team members.		[SW3] Assessment of knowledge contained in written work and projects		
	[K7_K06] is aware of the impact of engineering activities on the quality of applied solutions and the environment		Select and use appropriate specialist literature, identify relevant components of a mechatronic system, select appropriate simulation methods and tools, present and analyse simulation results, use specialist engineering tools, evaluate correct operation of the designed system, explain differences between simulation results and laboratory tests.		[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice		

Subject contents	<p>CAD lecture Description of computer aided design (CAD) tools for the design of electrical machines and equipment. Design calculations using CAS (computer algebra system) programs (Mathcad, Mathematica, Macsyma, SMath). Construction of 2D and 3D parametric geometrical models of equipment and preparation of technical documentation (AutoCAD, Inventor, CATIA). Demonstration of virtual prototyping capabilities using Computer Aided Engineering (CAE) programs (Flux2D, Maxwell, Opera, Ansys). CAM Description of programmes controlling machines, robots, internal transport systems, storage systems, etc. Link to the shop-floor scheduling (SFC) and workstation management (I/OC) modules of the MRP II system. Automation in CAM systems of manufacturing functions: technological operations (e.g. machining), management of tool changing (tooling), control of part assembly, control of transport of components and finished products, control of intermediate storage, ensuring continuity of the manufacturing process. CNC Description of computer numerical control systems (numerically or computer controlled machine tools). Structure, principle of operation, control methods and programming of numerically controlled machine tools. Laboratory Produce technical documentation of an electrical device component (or electrical machine) indicated by the instructor, including a 3D model, detailed technical drawings and description of the technology.</p>											
Prerequisites and co-requisites	Knowledge of computer programming.											
Assessment methods and criteria	<table border="1" style="width:100%; border-collapse: collapse;"> <thead> <tr> <th style="width:33%;">Subject passing criteria</th> <th style="width:33%;">Passing threshold</th> <th style="width:33%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Project</td> <td>50.0%</td> <td>100.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Project	50.0%	100.0%			
	Subject passing criteria	Passing threshold	Percentage of the final grade									
Project	50.0%	100.0%
