

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Real and coplex analysis , PG_00021033							
Field of study	Mathematics							
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026			
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study		
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1		Language of instruction		Polish			
Semester of study	1		ECTS credits		5.0			
Learning profile	general academic profile		Assessmer	nt form		exam		
Conducting unit	Divison Of Nonlinear Analysis -> Institute Of Applied Mathematics -> Faculty Of Applied Physics And Mathematics -> Wydziały Politechniki Gdańskiej							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Styborski					
	Teachers		dr inż. Marcin Styborski					
			mgr inż. Urszula Goławska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		5.0		60.0		125
Subject objectives	The aim of the course processed during the undergraduate level. sequences of function	three-semeste These are also	r course of cal	culus and the c nich students and	course o re alrea	f compl dy famil	lex functions liar (converge	at the ence of

Learning outcomes	Course outcome	Subject outcome	Method of verification				
	[K7_U02] has the ability to check the correctness of conclusions in constructing formal proofs, sees formal structures related to the basic areas of mathematics and understands the importance of their properties.	The student is able to verify proofs based on rule of inference and consciously uses elementary methods and reasoning.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject				
	[K7_W01] has enhanced knowledge of basic branches of mathematics, demonstrates knowledge theorem and hypotheses, has understanding of the role and importance of mathematical reasoning structure.	The student is familiar with - Theorems about integration of functional sequences - Proof of the existence of a continuous function without derivative and topological properties of the set of such functions - Proof of the theorem about the divergence of Fourier series of continuous functions	[SW1] Assessment of factual knowledge				
	[K7_U07] at an advanced level and covering modern mathematics, applies and presents in speech and in writing the content and methods of a selected branch of mathematics	The student uses the methods of functional analysis and topology in the formulation of theses in the field of mathematical analysis.	[SU4] Assessment of ability to use methods and tools				
	[K7_U03] uses differential and integral calculus, elements of complex analysis, algebraic methods, applies them in typical practical	Student independently formulate assertions and verifies the importance of assumptions and their significance in the proof.	[SU3] Assessment of ability to use knowledge gained from the subject				
Subject contents							
	<ol> <li>The criteria for uniform convergence: Dini, Weierstrass, Dirichlet</li> <li>Arzeli lemma and theorem of bounded convergence for the Riemann integral</li> <li>Applications of the theorem of bounded convergence. The dominated convergence theorem for the improper Riemann integral.</li> <li>Continuous function without derivative.</li> <li>Baire theorem. The set of functions without derivative in Banach spaces of continuous functions for the rate of state theorem. The set of functions without derivative in Banach spaces of continuous functions for the rate of state theorem. The set of functions without derivative in Banach spaces of continuous functions for the rate of state theorem. The set of functions without derivative in Banach spaces of continuous functions for the series: the Riemann-Lebesgue Lemma, pointwise convergence, the principle of localization, Dirichlet and Fejer kernel; divergence of Fourier series of continuous functions; theorem of convergence in the L ^2 space</li> <li>Holomorphic functions. Power series, analyticity.</li> <li>Index of the curve. Cauchy's theorem for a simply connected domain; consequences.</li> <li>Homologous curves. Global Cauchy's theorem</li> </ol>						
Prerequisites and co-requisites	Familiarity with the: - primitive set theory						
	- calculus.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Midterm colloquium	51.0%	50.0%				
	Activity in the classes	51.0%	10.0%				
	Written exam	51.0%	40.0%				
Recommended reading	eading       Basic literature       1. W. Rudin, Principles of mathematical analysis, McGraw-Hill, 197         2. W. Rudin, Real and complex analysis, McGraw-Hill, 1987       3. F. Leja, Funkcje zespolone, Wydawnictwo naukowe PWN 2006						
	Supplementary literature						
		Uniwersytetu Łódzkiego, 2008					
	eResources addresses Adresy na platformie eNauczanie:						

Example issues/ example questions/ tasks being completed	Check the pointwise/uniform convergence of a sequence of functions Calculate the sum of a series of functions Show examples of Baire theorem Expand a function in a Fourier series Calculate the index of the curve
Work placement	Not applicable
