

Subject card

Subject name and code	Script languages, PG_00062720						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division Of Physics Of Disordered Systems -> Institute Of Nanotechnology And Materials Engineering -> Faculty Of Applied Physics And Mathematics -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Mateusz Cieślík				
	Teachers		dr inż. Mateusz Cieślík				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is to familiarize students with the basics of programming. The course framework includes learning the Python language and using it to solve sample problems encountered in engineering practice.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U01] applies knowledge of mathematics, physics, chemistry, IT tools and other engineering disciplines to solve theoretical, engineering and technological problems		The student is able to write programs in Python from scratch, which are used to solve selected theoretical, engineering, and technological problems.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	[K6_K02] makes decisions independently, carries out a critical assessment of own actions and actions of managed teams, is ready to make decisions and accept responsibility for the consequences of these actions		The student can propose a solution to a given problem and present it to a group. Additionally, the student understands and accepts criticism of the solution he/ she presented. The student can also critically evaluate solutions proposed by others, identify weaknesses in these solutions, and suggest ways to improve them.		[SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills		
	[K6_W01] demonstrates knowledge and understanding of mathematics, physics, chemistry and IT tools at the level necessary to formulate and solve typical engineering and technological problems		The student knows the basics of the Python language to a degree that allows for its practical use in solving typical engineering and technological problems.		[SW1] Assessment of factual knowledge		

Subject contents	Lecture: 1. Introduction to programming 2. Python language characteristics and applications 3. Python interpreter 4. Basics of programming in Python a) variables and constants, and their types b) basic arithmetic operations, assignment operation c) conditional statements d) loops e) functions 5. Lists, tuples, sequences 6. Modules (including standard ones) and packages 7. Reading from/writing to files 8. Errors and exceptions 9. Classes 10. Modules/packages useful in engineering practice Laboratory: The laboratory involves practical use of the Python language in solving sample problems encountered in engineering practice. During the laboratory sessions, sample programs illustrating the content discussed in the lectures will be worked through. Typical programming constructs/solutions/algorithms will also be discussed. The scope of the laboratory also includes work on exemplary problems. Project: The project involves working on a given problem and solving it from scratch using a program written in Python.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam in theory	50.0%	25.0%
	working on lab problems	50.0%	50.0%
	working on project	50.0%	25.0%
Recommended reading	Basic literature	1. M. Lutz, Python. Wprowadzenie. Wydanie V, Helion 2023. 2. Python 3.12.2 documentation, https://docs.python.org/3/ 3. The Python Tutorial, https://docs.python.org/3/tutorial/index.html	
	Supplementary literature		
		eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	1. Discuss the syntax of for and while loops in Python. 2. Explain how modules and packages are used in Python. 3. Explain how functions are defined in Python. 4. Write a program that processes a data set according to given rules. 5. Write a program that solves a given engineering problem.		
Work placement	Not applicable
