

Subject card

Subject name and code	Programming in LabView, PG_00062726						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2025		Academic year of realisation of subject			2026/2027	
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study	
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	3		ECTS credits			3.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Institute Of Nanotechnology And Materials Engineering -> Faculty Of Applied Physics And Mathematics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marek Chmielewski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The purpose of the course is to familiarize the student with the capabilities of National Instruments' LabVIEW engineering software at a level that allows individual development of simple, functional applications. As part of the course, the student will learn the capabilities of the environment and the basics of using the graphical programming system used in the LabVIEW language. The lecture will present, based on examples, the range of possible applications of the environment in the support and operation of research measurement systems from the level of operation control to advanced post processing operations or report preparation. The scope of possible applications of the environment will also be presented, from simple IT systems to advanced solutions cooperating with industrial controllers. The course makes it possible to approach the CLAD certification exam.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W01] demonstrates knowledge and understanding of mathematics, physics, chemistry and IT tools at the level necessary to formulate and solve typical engineering and technological problems		The student is able to independently, on the basis of his knowledge, create software to solve a problem related to the automation of the measurement process, the analysis of measurement data, a problem in any technical tasks.			[SW3] Assessment of knowledge contained in written work and projects	
	[K6_U01] applies knowledge of mathematics, physics, chemistry, IT tools and other engineering disciplines to solve theoretical, engineering and technological problems		The student is able to independently, on the basis of his knowledge, construct an algorithm and apply the knowledge of technical sciences to solve any scientific problem. Applies in an optimized way the rules of physics mathematics chemistry to improve existing industrial and research control systems.			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools	
Subject contents	Lecture linked to workshop and laboratory activities. During the course, the student will learn the idea and capabilities of LabVIEW software. Areas in which engineering software is used will be presented. The user interface of the environment and implementations of basic software structures will be presented. The process of creating simple applications will be presented, in the form of a workshop, which will be gradually expanded to include the widest possible range of procedures and functions available in the LabVIEW environment. Advanced elements of the environment will be presented, along with the process of distributing finished applications. The range of topics applicable to the CLAD certification exam will be presented.						
Prerequisites and co-requisites	Not required						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Projects carried out in classes	100.0%	100.0%
Recommended reading	Basic literature	Online resources provided by Natinal Instruments among others: https://www.ni.com/pdf/gettingstarted/introduction_to_labview_tutorial.pdf https://learn.ni.com/pages/getting-started https://www.labviewmakerhub.com/doku.php?id=learn:tutorials:labview:basics	
	Supplementary literature	Not Required	
	eResources addresses	Adresy na platformie eNauczanie:	
	Example issues/ example questions/ tasks being completed	Graphical development environment Block diagram, front panel. Controls and indicators. Variable races (Races conditions) State machine algorithms	
Work placement	Not applicable
