

Subject card

Subject name and code	Development trends in smart industry, PG_00062764						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2028/2029		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division Of Electrochemistry And Surface Physical Chemistry -> Institute Of Nanotechnology And Materials Engineering -> Faculty Of Applied Physics And Mathematics -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marta Przeźniak-Welenc				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	15.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to familiarize students with key trends and technologies of Industry 5.0, including smart factories, robotics, digital twins, data integration, real-time monitoring systems, sensors, failure prediction, safety, reliability, and the integration of mobile systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U06] performs analysis, exploration and cleaning of data sets, can use statistical models and machine learning models, integrate various analytical, management and data storage tools		The student is able to perform data analysis, exploration, and cleaning, utilize statistical and machine learning models, as well as integrate various data analytics, management, and storage tools.		[SU1] Assessment of task fulfilment		
	[K6_W06] demonstrates knowledge related to data analysis and engineering, machine learning, knows the principles of integrating data with management systems to analyze complex engineering and technological problems		The student knows how to apply the principles of data analysis and engineering, as well as machine learning, to integrate data with management systems in order to analyze complex engineering and technological problems.		[SW1] Assessment of factual knowledge		

Subject contents	<p>Lecture 1 (1h): Introduction to Industry 5.0</p> <p>Basic Concepts:</p> <ul style="list-style-type: none"> • Definition and goals of Industry 5.0 • Differences between Industry 4.0 and 5.0 • Key technologies and trends <p>Factory Twerking:</p> <ul style="list-style-type: none"> • Concept and applications • How machines communicate in real-time <p>Lecture 2 (1h): Digital Twins</p> <p>Definition and Concept:</p> <ul style="list-style-type: none"> • What is a digital twin? • Applications of digital twins in industry <p>Creation and Management:</p> <ul style="list-style-type: none"> • Methods for creating digital twins • Examples of implementations and benefits <p>Lecture 3 (1h): Smart Factories</p> <p>Concept of a Smart Factory:</p> <ul style="list-style-type: none"> • Key features and technologies • Examples of implementations <p>Benefits and Challenges:</p> <ul style="list-style-type: none"> • How smart factories improve production efficiency • Potential challenges and barriers <p>Lecture 4 (1h): Use of Robotics in Manufacturing</p> <p>Types of Robots:</p> <ul style="list-style-type: none"> • Types of industrial robots and their applications <p>Process Automation:</p> <ul style="list-style-type: none"> • How robotics contributes to process automation • Case study on the use of robotics <p>Lecture 5 (1h): Data Integration and Real-Time Monitoring Systems</p> <p>Data Integration Technologies:</p> <ul style="list-style-type: none"> • Tools and methods of integration <p>Monitoring Systems:</p> <ul style="list-style-type: none"> • How monitoring systems support real-time production management • Examples of implementations <p>Lecture 6 (1h): Sensor Implementation</p> <p>Types of Sensors:</p> <ul style="list-style-type: none"> • Types of sensors used in industry <p>Applications:</p> <ul style="list-style-type: none"> • How sensors are used for monitoring and automation • Integration of sensors with production systems <p>Lecture 7 (1h): Failure Prediction</p>
------------------	---

Prediction Methods:

- Techniques for failure prediction

Data Analysis:

- Using historical data for prediction
- Examples of systems supporting predictive maintenance

Lecture 8 (1h): Safety and Reliability Issues

Basic Concepts:

- Industrial safety and its importance

Technologies and Methods:

- How to enhance the reliability of industrial systems
- Examples of security systems

Lecture 9 (1h): Integration of Mobile Systems

Role of Mobile Systems:

- How mobile technologies impact industry

Integration with Production Systems:

- Examples of integration and benefits

Lecture 10 (1h): ERP and BI Systems in the Context of Industry 5.0

Introduction to ERP and BI Systems:

- How ERP and BI systems support management in Industry 5.0

Integration with New Technologies:

- How they integrate with Industry 5.0 technologies

Lecture 11 (1h): Case Study: Smart Factory in Practice

Case Analysis:

- Example of smart factory implementation

Benefits and Challenges:

- Analysis of outcomes and conclusions

Lecture 12 (1h): Case Study: Sensor Implementation and Real-Time Monitoring

Case Analysis:

- Implementation of monitoring systems and sensors

Results and Conclusions:

- Examples of applications and effects

Lecture 13 (1h): Case Study: Failure Prediction and Safety

Case Analysis:

- Implementation of failure prediction systems

Safety Issues:

- Methods used in security systems

	Lecture 14 (1h): Trends and the Future of Industry 5.0		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture	50.0%	70.0%
	Seminar	50.0%	30.0%
Recommended reading	Basic literature	Podstawy teoretyczne i praktyczne rewolucji przemysłowej 4.0 i 5.0 FNCE, KNAST PAWEŁ, MACIEJEWSKI RYSZARD	
	Supplementary literature	https://przemyslprzyszlosci.gov.pl/tag/przemysl-5-0/	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Sample Topics: <ul style="list-style-type: none">• Key technologies and features of smart factories• Benefits and challenges of implementing a smart factory• Automation of production processes through robotics Sample Questions: <ul style="list-style-type: none">• What are the key technologies used in smart factories?• What is a digital twin, and what are its applications in the industry?• What are the benefits of implementing real-time monitoring systems?• What are the main types of industrial robots and their applications? Sample Seminar Tasks: <ul style="list-style-type: none">• Develop a case analysis of smart factory implementation, considering the benefits and challenges.• Prepare a case study on the use of robotics in a selected production process.		
Work placement	Not applicable
