

Subject card

Subject name and code	Physics of materials , PG_00061913						
Field of study	Materials Engineering, Materials Engineering						
Date of commencement of studies	October 2025	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Division of Nanomaterials Physics -> Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Barbara Kościelska				
	Teachers		prof. dr hab. inż. Barbara Kościelska				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	5.0		35.0	100	
Subject objectives	The goal is to gain fundamental knowledge in materials physics (metals, semiconductors, dielectrics)						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K01] Understands the need to improve professional and personal competencies; is conscious of own limitations and knows when to turn to experts, properly establishes priorities helping to accomplish tasks defined by oneself or others.		Understanding the need to improve competences, awareness of one's own knowledge and the ability to use the knowledge of experts.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W03] Has knowledge of materials science and can relate the properties of materials with their structure and composition, knows the theoretical description of phenomena occurring in materials subjected to external factors.		Knowledge of the physics of materials, allowing one to approach the material as a whole, characterized by various properties.		[SW1] Assessment of factual knowledge		
	[K6_U01] Can properly use selected analytical, simulation and experimental methods, as well as devices for measuring the fundamental properties of materials and technological processes.		The ability to select and use methods enabling the measurement of basic quantities characterizing materials and technological processes.		[SU4] Assessment of ability to use methods and tools		

Subject contents	<p>Course content – lecture 1. A short introduction to atomic and quantum physics.2. Crystal binding energy. Bonds: ionic, covalent, metallic, molecular. Crystal structure.3. Thermal properties of solids. Atomic vibrations in crystals - phonons. Phonon statistics. Density of states. Specific heat: Dulong-Petit law, Einstein and Debye models. Thermal conductivity of solids. Thermal expansion.4. Classical theory of free electrons in metal. Electrical conductivity of metals. Quantum models of electrons in a crystal. Density of electronic states. Band structure of a crystal. Electronic thermal conductivity and specific heat.5. Semiconductor crystals. Electron statistics - concentration of intrinsic carriers. Fermi level in an intrinsic semiconductor. Intrinsic conductivity. Impurity states. The equation of electrical neutrality of a semiconductor. The Fermi level in a doped semiconductor. The ionization energy of the dopant. Dopant conductivity.6. Examples of semiconductor devices.7. Glasses and amorphous materials and their preparation. Short-range ordering, transition from the liquid phase to the glass phase.8. Dielectrics. Macroscopic and microscopic description of dielectrics. Polarization. Piezoelectrics and ferroelectrics.9. Magnetic materials. Microscopic and macroscopic description of magnetic materials. Diamagnetism, paramagnetism, ferromagnetism.10. Superconductivity, properties of the superconducting state, type I and II superconductors, Cooper pairs, high-temperature superconductors. Josephson phenomena.</p> <p>LABORATORY EXERCISES: Students realize laboratory exercises connecting with the topics of the lectures</p>											
Prerequisites and co-requisites	Knowledge in physics and analytical mathematics											
Assessment methods and criteria	<table border="1" data-bbox="448 680 1487 786"> <thead> <tr> <th data-bbox="448 680 794 714">Subject passing criteria</th> <th data-bbox="794 680 1141 714">Passing threshold</th> <th data-bbox="1141 680 1487 714">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 714 794 748">Written exam</td> <td data-bbox="794 714 1141 748">50.0%</td> <td data-bbox="1141 714 1487 748">50.0%</td> </tr> <tr> <td data-bbox="448 748 794 786">Passing all laboratory exercises</td> <td data-bbox="794 748 1141 786">50.0%</td> <td data-bbox="1141 748 1487 786">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Written exam	50.0%	50.0%	Passing all laboratory exercises	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Written exam	50.0%	50.0%										
Passing all laboratory exercises	50.0%	50.0%

eResources addresses												
Example issues/ example questions/ tasks being completed	Amorphous and crystalline solids. Bonding energy in crystals. Types of bonds: Ionically and covalently bonded solids. Metallic and molecular bonding. Thermal properties of solids. Atomic vibrations in crystals. Phonons. Heat capacity, thermal expansion, thermal conductivity of solids. Classical theory of free electrons in metals. Fundamentals of band theory. Quantum model of free electrons in metals. Fermi-Dirac distribution. Density of states. Band theory of electrical conduction in metals. Specific heat capacity of the electrons. Thermal conductivity in metals. Superconductivity. Macroscopic properties of superconductors. Classification of solid in the frame of band theory of solids. Intrinsic and extrinsic semiconductors. Effective mass. The role of doping. Electrical conductivity. Magnetic properties of materials. Lasers											
Practical activities within the subject	Not applicable											

Document generated electronically. Does not require a seal or signature.
