| Subject name and code | Magnetism: from fundamentals to spintronics, PG_00036987 | | | | | | |
| Field of study | Nanotechnology | | | | | | |
| Date of commencement of studies | October 2025 | | Academic year of realisation of subject | | | 2025/2026 | |
| Education level | second-cycle studies | | Subject group | | | Obligatory subject group in the field of study Subject group related to scientific research in the field of study | |
| Mode of study | Full-time studies | | Mode of delivery | | | at the university | |
| Year of study | 1 | | Language of instruction | | | English | |
| Semester of study | 1 | | ECTS credits | | | 2.0 | |
| Learning profile | general academic profile | | Assessment form | | | assessment | |
| Conducting unit | Institute Of Nanotechnology And Materials Engineering -> Faculty Of Applied Physics And Mathematics -> Wydział Politechniki Gdańskiej | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr hab. inż. Leszek Piotrowski | | | | |
| | Teachers | | dr hab. inż. Leszek Piotrowski | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 0.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 30 | | 2.0 | | 18.0 | 50 |
| Subject objectives | The student learns the basics of magnetism, the laws and equations that determine the parametersdescribing the magnetic field. He learns about the influence of magnetic fields on macro-, micro- andnanoscale materials. The student learns the methods of magnetic properties determination and possibilitiesof using magnetic materials in practice. The student also learns about spin, theoretical foundations ofspintronics and practical ways of manipulation of the spin of electrons. Studies the practical applications ofspintronics, e.g. spin valves and tunnelling junctions. | | | | | | |

| | | | |
|---------------------------------|---|--|--|
| Learning outcomes | Course outcome | Subject outcome | Method of verification |
| | [K7_W02] has enhanced, theoretically supported, detailed knowledge of selected branches of nanotechnology and, according to the needs, within the scope of related fields of science and technology. | Student knows how to describe the behaviour of spin in quantum mechanics, understand the concept of spinor and spin matrix. He also knows the problems associated with spin decoherence and manipulation of spin orientation. | [SW1] Assessment of factual knowledge |
| | [K7_W03] has general knowledge on current development directions and discoveries in physics, chemistry, technology and applications of nanostructures. | The student understands the principles of operation of spintronic devices. Student can explain such issues as e.g. the phenomenon of giant magnetoresistance (GMR) or the principle of operation of magnetic tunnel junctions (MTJ). | [SW1] Assessment of factual knowledge |
| | [K7_U01] can learn individually, obtain knowledge and integrate information from literature, databases and other properly selected sources (in Polish and English). Has the ability of critical analysis and selection of information. | Student can carry out the analysis of the available literature (on-line databases) and discuss selected issue (from the field of magnetism) described there. | [SU2] Assessment of ability to analyse information |
| | [K7_U07] can apply the obtained specialist knowledge to the problems within exact sciences, natural or technical sciences. | Student can propose the application of magnetic nanoparticles in other areas of science such as e.g. medicine. | [SU2] Assessment of ability to analyse information |
| Subject contents | <p>1. Basic magnetic quantities2. Magnetism of atoms and molecules, atoms in external magnetic fields3. Solid state magnetism, types of magnetic materials (dia-, para-, and ferromagnetism)4. Ferromagnetism and domain structures5. Magnetism of small particles, single domain particles (StonerWohlfarth model), thin films6. Experimental techniques of magnetic properties and magnetisation state determination. Domain structurevisualisation and analysis.7. Spin transport spin polarization, spin filters, Rashba and Dresselhaus interactions8. Two currents model, spin injection and coherence length, spin dependent Hall effects.9. Magnetoresistance anisotropic magnetoresistance (AMR), gigantic magnetoresistance (GMR),tunnelling magnetoresistance (TMR) and colossal magnetoresistance (CMR).10. Spin valves11. Magnetic data storage (HDDs)- storage media, read/write heads, construction issues.12. Spin transfer torque (STT) current induced magnetisation switching, nanooscillators13. Magnetic random access memories (MRAM), STT-MRAMs14. Spin transistors, Data and Das transistor, spin valve transistor, spin Hall effect transistor15. Magnetic logic devices</p> | | |
| Prerequisites and co-requisites | Basic knowledge of quantum mechanics (Schrödinger's equation) and solid state physics (charge transport in the solid state). | | |
| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
| | written test | 50.0% | 100.0% |
| Recommended reading | Basic literature | <p>1. Handbook of Spin Transport and Magnetism; Ed. E.Y. Tsymbal, I.Žutić; CRC Press 20122. J. Stohr, H.C. Siegmann; Magnetism From Fundamentals toNanoscale Dynamics; Springer, 2006.</p> | |

| | | |
|--|---|---|
| | Supplementary literature | 1. S. Bandyopadhyay, M. Cahay; Introduction to spintronics, CRC Press, 2008 |
| | eResources addresses | Adresy na platformie eNauczenie: |
| Example issues/ example questions/ tasks being completed | <p>1. On the basis of the Biot-Savart law calculate the induction of the magnetic field in the centre of conducting loop</p> <p>2. Discuss the construction of spin valve</p> <p>3. What criteria must meet the material used for the data storage</p> <p>4. Discuss the phenomena causing spin coherence in solid body</p> <p>5. Explain the process of spin transfer torque</p> | |
| Work placement | Not applicable | |
