

Subject card

Subject name and code	, PG_00061718								
Field of study	Environmental Engineering								
Date of commencement of	October 2025	Academic year of			2025/2026				
studies	30,000, 2020		realisation of subject			2020/2020			
Education level	second-cycle studies		Subject group			Optional subject group			
						Subject group related to scientific research in the field of study			
Mode of study	Part-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department Of Geote > Wydziały Politechni	echnical And H iki Gdańskiej	ydraulic Engine	draulic Engineering -> Faculty Of Civil And Environmental Engineering -					
Name and surname	Subject supervisor		dr hab. inż. Piotr Zima						
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	15.0	0.0	10.0	0.0	0.0		25	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	ning activity Participation in classes includ				Self-study SUM		SUM	
	Number of study hours	25		3.0		52.0		80	
Subject objectives	Mastering the basics of mathematical modeling and basic numerical techniques used in sanitary engineering. Practical aspects of modeling in sanitary engineering.								
Learning outcomes	Course out	Subject outcome			Method of verification				
	K7_W01		The student formulates the problem of solving differential equations with ordinary and partial derivatives describing selected problems in the field of sanitary engineering. It describes the solution of an engineering problem using a structural algorithm. Uses basic numerical methods to solve problems. He knows how to take into account practical aspects at this stage of modeling.			[SW1] Assessment of factual knowledge			
	[K7_W12] has knowledge of contemporary and useful principles on data acquisition, filtration, processing and analysis		The student is able to obtain information on the development of numerical methods used in sanitary engineering and is able to apply them in practice.			[SW1] Assessment of factual knowledge			
	K7_U06		Student is able to formulate a problem in the field of mathematical description of the phenomenon and select the appropriate numerical or analytical methods to solve it on a practical level		[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools				
	[K7_U05] can rely on scientific sources for modern methods and technologies, and propose trends in the development of methods and rules for acquiring, filtering, processing and analyzing data		The student is able to obtain information on the development of numerical methods used in sanitary engineering. He knows the practical aspect of their use.		[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools

Solving systems of algebraic linear equations. Methods for solving nonlinear equations and systems of nonlinear equations, Interpolation and approximation. Solving ordinary differential equations, initial problem and boundary problem inspired sets of nonlinear equations with partial derivatives. Classification of equations. Formulating a problem solution with partial derivatives. Classification of equations. Formulating a problem solution. Finite difference method, approximation of first and second order derivatives. LABORATORY Solving ordinary differential equations describing selected issues in the field of environmental engineering. Practical spect of modeling - simulation of rainwater outflow in the HEC-RAS program Knowledge of basic computer operation and operating system. Knowledge of subjects: Mathematics, and co-requisites Fundamentals of computer science and Hydraulics. Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the finial grade is 60.0% 50.0%	Subject contents	LECTURE							
nonlinear equations. Interpolation and approximation. Solving ordinary differential equations. Intelliproblem initial problem initial problem and boundary problem. Methods of numerical solution of the initial problem initial problem and and boundary problem. Methods of numerical solution of the initial problem initia	Subject contents	LECTORE							
nonlinear equations. Interpolation and approximation. Solving ordinary differential equations. Intelliproblem initial problem initial problem and boundary problem. Methods of numerical solution of the initial problem initial problem and and boundary problem. Methods of numerical solution of the initial problem initia									
LABORATORY		nonlinear equations. Interpolation and approximation. Solving ordinary differential equations: initial problem and boundary problem. Methods of numerical solution of the initial problem: single-step methods, explicit and implicit multi-step methods. Solving systems of ordinary differential equations. Solving differential equations with partial derivatives. Classification of equations. Formulating a problem solution. Finite							
Solving ordinary differential equations describing selected issues in the field of environmental engineering. Practical aspect of modeling - simulation of rainwater outflow in the HEC-RAS program Knowledge of basic computer operation and operating system. Knowledge of subjects: Mathematics, and co-requisites Assessment methods Subject passing criteria Passing threshold Percentage of the final grade 60.0% 50.0% Recommended reading Basic literature 1. Szymkiewicz R.: Matematyczne modelowanie przepływów w rzekach i kanafach, Wyd. Naukowe PWN Warszawa 2000. 2. Szymkiewicz R.: Metody numeryczne w inżynierii wodnej. Wyd. Politechniki Gdańskiej, 2012. Supplementary literature 1. FortunaZ., Macukow B., Wąsowski J.: Metody numeryczne. WNT Warszawa 1982. eResources addresses Adresy na platformie eNauczanie: Example issues/ example questions/ tasks being completed Describe Newton's method for solving a single nonlinear equation and systems of nonlinear equations. Describe the Runge-Kutta method Discuss the basics of the finite difference method Describe the finite-difference solution of the transport equation with an implicit scheme
