

Subject card

Subject name and code	SPECIAL GEODETIC MEASUREMENTS B, PG_00044857						
Field of study	Geodesy and Cartography						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department Of Geodesy -> Faculty Of Civil And Environmental Engineering -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		8.0		82.0	150
Subject objectives	Teaching students about standard geodetic work, including road and rail objects.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W11] understands the concepts and has in-depth knowledge in the field of geodetic building monitoring, extended with basic knowledge in the field of statics and dynamics of engineering structures		get the ability to use the geometric levelling in the vertical displacements determination				
	[K6_K02] is ready to solve problems related to the profession of geodesy and cartography engineer and to assess risks and effects of the performed activity		get the ability to plan and conduct geodetic engineering tasks				
	[K6_W07] has a well-established knowledge and understands concepts in the field of engineering geodesy including the use of calculations and measurements methods carried out with the use of geodetic instruments and photogrammetric and remote sensing technologies related to geodetic support for investment, surveying and inventory measurements and photogrammetry with remote sensing		get the ability to use the statistical analysis in the geodetic works of engineering measurements				

Subject contents	Accuracy analysis using local estimators of variance coefficients.		
	Free adjustment of vertical and horizontal networks.		
	Technologies for determining the vertical displacements taking into account rail and road structures.		
	Standards for taking measurements in railway geodesy.		
	Trigonometric leveling in determining the height of the measurement's network points.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lab classes – practical classes – getting the credit of obligatory tasks	100.0%	0.0%
	end-term test - subjects presented during the lectures, practical and lab classes (60 minutes)	50.0%	100.0%
	practical classes – practical classes – getting the credit of obligatory tasks	100.0%	0.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Present the principles of free adjustment of realisation networks.		
	Present the rules for determining the local coefficients of variance.		
	Describe the division of the railway geodetic network.		
	Describe the methods of determining vertical displacements of road and rail structures.		
	Present the technology of establishing a basic horizontal railway network.		
Work placement	Not applicable
