

Subject card

Subject name and code	Data warehouses, PG_00068355						
Field of study	Data Engineering						
Date of commencement of studies	October 2025	Academic year of realisation of subject				2027/2028	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				blended-learning	
Year of study	3	Language of instruction				English	
Semester of study	5	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Software Engineering -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Teresa Zawadzka					
	Teachers	dr inż. Teresa Zawadzka dr Ewa Kozłowska-Walania					
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 13.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	45	4.0		26.0	75	
Subject objectives	The aim of the course is introduction the student to data warehouse concepts, to applications and design of data warehouses, as well as to methods of querying a data warehouse. The student also gets knowledge how to use business <i>intelligence tools</i> .						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U05] develops innovative solutions for data analysis and processing, using appropriate methods and tools	The student designs Business Intelligence solutions based on Ralph Kimball's architecture.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	[K6_K03] demonstrates the ability to think critically and analytically and integrates knowledge from many disciplines in order to make effective decisions	The student can analyze business processes to provide Business Intelligence solutions. In addition, the student can analyze data generated during the execution of business processes to determine their completeness for business analyses.			[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W05] integrates data from multiple sources in order to analyze complex business problems	The student can design and implement ETL (Extract, Transform, and Load) processes for data warehouses from data sources with various structures.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		

Subject contents	Course content – lecture 1. Basic concepts of data warehousing  2. Multi-dimensional data model in data warehouses. Categorical and hierarchical dimensions.  3. The star schema and the snowflake schema. Constelation schema.  4. Basic operations on OLAP cubes.  5. Memory models in data warehouses  6. The architecture of business intelligent solutions.  7. The rules for creating a data warehouse.  8. MDX language simple and advanced queries  9. ETL (Extract, Transform, Load) processes  10. Reporting systems		
	Course content – laboratory 1. Practical presentation of topics covered in the lecture.  2. Design and implementation of a BI system.		
Prerequisites and co-requisites	Basic database course completed		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lab	50.0%	50.0%
	exam	50.0%	50.0%
Recommended reading	Basic literature	W.H. Inmon: Building the Data Warehouse. J. Wiley&Sons,  R. Kimball: Data Warehouse Toolkit. J. Wiley&Sons,  P. Ponniah: Data Warehousing. J. Wiley&Sons, .  K. Goczyła. T. Zawadzka. "Data Warehousing". Lecture materials.  V. Poe, P. Klauer, S. Brebst: Tworzenie hurtowni danych, WNT	
	Supplementary literature	None	
	eResources addresses		

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"><li>1. Design a data warehouse according to guidelines specified</li><li>2. Develop a data warehouse and test its functioning</li><li>3. Explain the differences between OLAP and OLTP processing</li><li>4. Specify the most important features of a data warehouse</li><li>5. What is the difference from the star schema and the snowflake schema?</li><li>6. Explain extensions of SQL for OLAP processing.</li><li>7. What is the ETL process?</li></ol>
Practical activities within the subject	Not applicable

Document generated electronically. Does not require a seal or signature.
