GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Advanced Techniques of Signal Processing, PG_00064086		
Field of study	Electronics and Telecommunications		
Date of commencement of studies	February 2026	Academic year of realisation of subject	2026/2027
Education level	second-cycle studies	Subject group	Optional subject group Specialty subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	English
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department Of Metrology And Optoelectronics -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Janusz Smulko	
	Teachers	prof. dr hab. inż. Janusz Smulko	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	0.0	0.0	15.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	4.0	16.0	50

Subject objectives

Knowledge of the selected advanced signal processing data, including data sets of measurement results.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	Is able to apply the presented methods in the selected metrological issues to solve this issue.	[SW3] Assessment of knowledge contained in written work and projects
[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Knowledge of the selected DSP algorithms.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	Is able to suggest	[SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task

Subject contents	Basic concepts of digital filtration (including non-uniform sampling), spectral analysis (estimation of spectral power density, higher order spectrum), stochastic resonance phenomenon, Wiener and Kalman filters, linear and non-linear adaptive filtration, time-frequency analysis, methods, signal denoising, regression and detection methods according to PCA and SVM algorithms, coding methods audio and video signals, DSL modem - basics of operation, methods of application preparation multimedia in embedded systems.
Prerequisites and co-requisites	

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
presentation	0.0%	50.0%
test	50.0%	50.0%

Recommended reading	Basic literature: Haykin S.: Adaptive filter theory. Prentice Hall, 2001. Zieliński T.P.: Cyfrowe przetwarzanie sygnałów. WKiŁ, Warszawa 2005. Vaseghi S.V.: Advanced Digital Signal Processing. Wiley 2009.
